**ARCHAEOLOGICAL INVESTIGATION
OF THE ELMBANK CHURCH AND CEMETERY
FORMER LOT 8, CONCESSION 5
TORONTO TOWNSHIP, PEEL COUNTY, ONTARIO**

FINAL REPORT

1.0 INTRODUCTION

On behalf of the *Greater Toronto Airports Authority*, *Archaeological Services Inc.* was contracted by *Acres International Limited* to conduct an archaeological investigation of the remains of the Elmbank/Fifth Line Church and Cemetery, located on the east half of Lot 8, Concession 5, in the former Township of Toronto, Peel County (Figures 1 and 2). The church and cemetery were opened in 1832 and closed in 1933, and served as the resting place of many of the earliest Catholic settlers of the rural settlements to the northwest of Toronto.

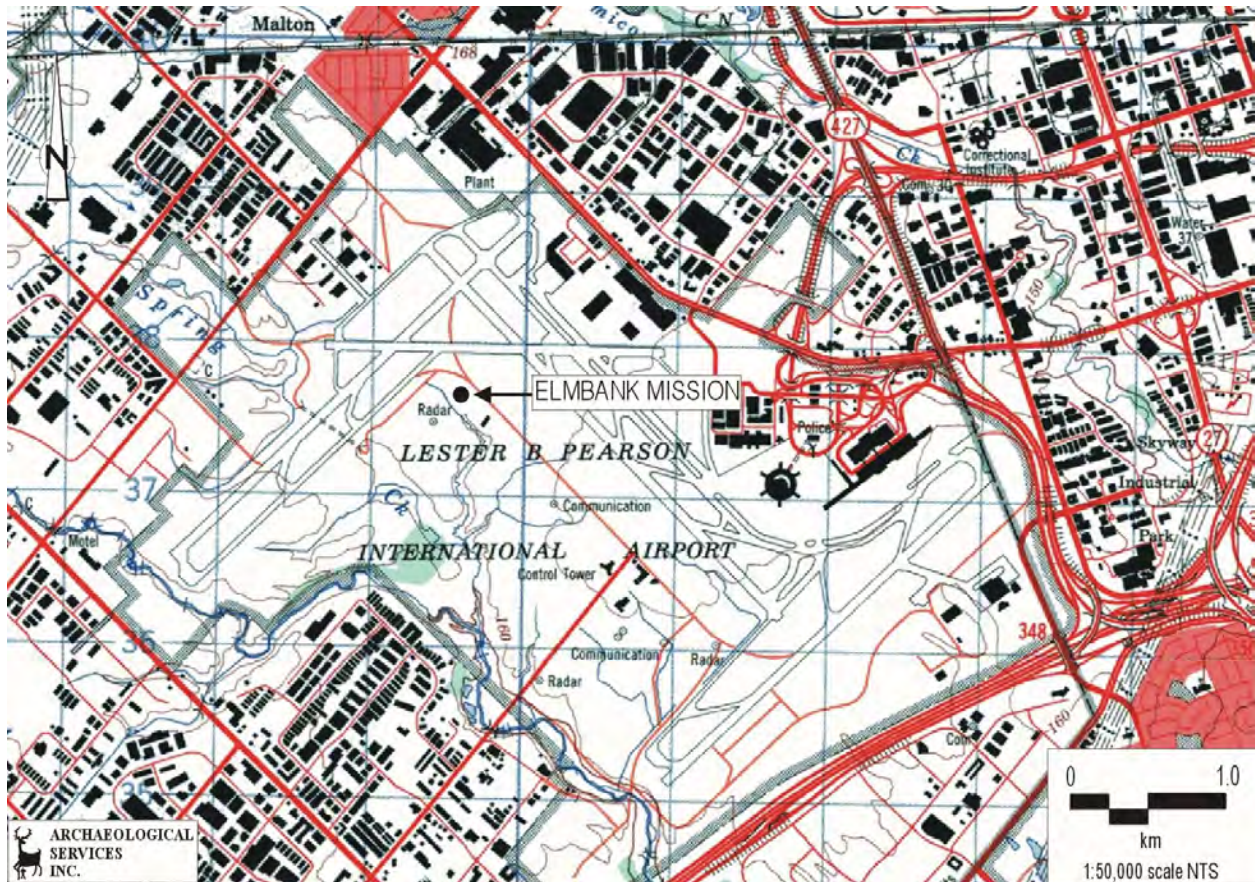

Figure 1: The location of the Elmbank Church and Cemetery within Lester B. Pearson International Airport.
NTS Sheet 30 M/12 (edition 6)

The project entailed the archaeological investigation of structural remains associated with the church and rectory, conservation of the extant grave markers, and the exhumation of all of the surviving interments within the cemetery in order that they could be relocated to the Assumption Cemetery in Mississauga.

The project was conducted under the overall direction of Dr. Ronald Williamson. Field direction was provided by Mr. Andrew Clish (Project Archaeologist) and Dr. Christopher Dudar (Project Physical Anthropologist). The project also entailed extensive genealogical research, conducted by Mr. Brian Gilchrist, and the conservation of the monuments, which was completed under the direction of Ms. Susan Maltby.

This report provides an account of all activities related to the project as well as complete listings of all documented material culture and catalogues of recovered artifacts.

Figure 2: The Elmbank Church and Cemetery as depicted on the map of the north part of Toronto Township in the 1877 *Illustrated Historical Atlas of Peel County*.

2.0 THE NEED TO RELOCATE THE REMAINS FROM THE ELMBANK CEMETERY

The cemetery was situated within Lester B. Pearson International Airport (LBPIA) in an area required for new airport facilities associated with the current Airside Development Project. The facilities in question include a new east-west runway, taxiway and a deicing facility.

Proposed expansion at LBPIA has been subject to extensive planning studies over many years culminating in the most recent Airside Development Project that was outlined in a comprehensive Environmental Impact Statement completed by Transport Canada in 1991. Much of the information presented here, which was originally prepared by Acres International, has been taken from the 1991 study.

The relocation of the cemetery was based on required airport facilities identified and recommended in Transport Canada's original 1991 Environmental Impact Statement which were subsequently approved through the federal government's environmental assessment and review process. The need to relocate the Elmbank Cemetery was identified at that time as a requirement of implementing the Airside Development Program.

2.1 General Background

The selection of the Malton site by the Toronto Harbour Commission in 1937 for Toronto's new airport necessitated the purchase of 13 farms covering 570 hectares (1400 acres). In 1939, Malton Airport offered ten daily flights served by two short runways and a farmhouse converted into an air terminal building. It was used by the RCAF during the war and operated by the federal Department of Transport as a civil airport. With the advent of jet powered aircraft in the 1950s, it was necessary to examine increasing runway lengths beyond the available length of 1800 m (6000 feet). The first "long runway" was completed in 1957. By the early 1960s, 200 daily flights were moving over 2 million passengers per year. In 1962, a new parallel runway (06R-24L) was completed. When Terminal 1 opened in 1964, the airport lands occupied 1700 hectares (4200 acres).

A new Master Plan was prepared in 1967 to assess airport growth through to the year 1985 for which 19 million passengers were forecast. The Master Plan recommended acquiring 1200 hectares (3000 acres) of adjacent land for future development of passenger terminals, runways and aviation support facilities including adding runway capacity on an incremental basis from 1979 to 1986. In response to objections from the community and municipalities, the main recommendations of the plan were not implemented in favour of less extensive improvements and constructing an interim terminal (the precursor to Terminal 2).

In 1968, the federal government decided to examine suitable locations for a new, second airport in lieu of the expansion outlined in the 1967 Master Plan. Preliminary investigations identified a site north of the Town of Pickering for more detailed evaluation. In 1975, the plans for a new airport at Pickering were shelved after considerable study and debate.

A Malton Contingency Plan study was initiated in 1976 to assess the capability to implement operational improvements at LBPIA. This assessed the potential of traffic diversions and effective management of the remaining traffic with specific operational initiatives and physical improvements to maximize the capacity of the three-runway system. A new Master Plan was completed in 1982, which emphasized that the airport was a mature facility in an advanced stage of development and that options for expansion were limited. It contained a number of recommended improvements to airport operations including the construction of a third passenger terminal.

In 1986, a Master Plan update was developed which included the recognition that additional runway capacity would ultimately be required if LBPIA was to continue as the primary terminus for major air carrier traffic in the Toronto area. In 1990, well over 21 million passengers were processed at the airport within the same airport area that existed in 1968 with only one change in the runway system (extension of runway 06L-24R). This led to the studies documented in the 1991 Airside Development Project Environmental Impact Statement completed by Transport Canada, which is the basis for the current development work at the airport. The proposals underwent extensive government and public review and were subsequently approved.

2.2 Air Traffic Demands and Capacity

Pearson Airport is the major international gateway to Canada for both passengers and cargo and handles more than twice the passenger volume of the country's next busiest airport (Vancouver). As the hub of Canadian aviation, LBPIA facilitates the free flow of goods and services which is critical to the economies of the Greater Toronto Region, the Province of Ontario and the nation as a whole. It ranks among the twenty busiest airports in the world.

In 1977, 11.5 million passengers used LBPIA which grew to 20 million in 1989. Forecasts for Year 2011 predicted a demand of over 40 million passengers, which represents a 3.5% yearly growth rate. The average growth rate between 1979 and 1989 was approximately 5% per year which included a growth rate of over 8% per year between 1984 and 1988. In 1999, 27.8 million passengers used the airport. LBPIA is handling more passengers and air traffic than the current infrastructure was designed to accommodate, leading to significant terminal and runway congestion.

2.3 Alternatives and Their Evaluation

The studies outlined in the 1991 Environmental Impact Statement looked at a series of initiatives to alleviate the medium term capacity shortfalls at LBPIA. These included the following:

- < improving operational efficiencies
- < examining various pricing mechanisms to control peak period demands
- < examining various administration and reservation procedures
- < transferring air traffic to other area airports
- < expanding airport facilities
- < a new airport to complement or replace LBPIA
- < traffic diversion to alternative modes of transportation

Detailed studies and analysis led to the conclusion that only by expanding existing airport facilities could projected demands be adequately handled and safety concerns addressed. A considerable number of alternative means of expansion were investigated including various possible new runway locations and lengths in both the east-west and north-south directions. A total of eight viable, new alternative runway alternatives were identified after a screening of all possible new runway locations. These were evaluated utilizing a series of technical, environmental and socio-economic factors.

Any expansion would have to include a new runway in the east-west direction, the predominant take off and landing orientation required by aircraft at the airport. Due to existing site constraints and aircraft safety and operating requirements, only one viable new runway alternative was identified that did not affect the Elmbank Cemetery and this alternative was considered significantly less desirable from the perspective of operations and inadequate with respect to meeting project

objectives. It was rejected as a stand-alone solution capable of providing adequate capacity improvement on its own. It ranked last of all the viable options from a technical standpoint. In the north-south direction three alternative new runways were identified, one of which impacted the cemetery.

Based on a detailed evaluation of the viable options, a new east-west runway situated approximately 400 metres south of existing runway 06L-24R was recommended. This runway and its associated taxiway affect the Elmbank Cemetery, requiring its relocation. A second east-west runway was also recommended at the south end of the airport. As well, a new north-south runway was recommended.

The 1991 study estimated that the total net user benefits of the three recommended new runways, based essentially on time delay savings, would amount to approximately \$985 million dollars for the period ending in 2011.

The rationale for the recommendations included the following statement:

Any decision on what future course to pursue for the airport must hinge on a careful weighing of the benefits and disadvantages experienced by all interest groups to determine a development strategy which best balances competing interests and thereby best serves the interests of the community at large. Such a balancing of interests will most certainly not totally satisfy any one group nor will be acceptable to all groups. Finding a compromise has been the most significant challenge of this planning process.

2.4 The Selected Alternative

In relation to the Elmbank Cemetery, the airport expansion plan components affecting the cemetery are the new east-west runway located 400 metres south of existing runway 06L-25R, its parallel taxiway and a new deicing facility required to service aircraft in the north end of the airport. Relocation of these facilities to avoid impacting the cemetery was not possible if expansion of airport capacity is to be achieved.

3.0 SUMMARY HISTORY OF THE ELMBANK MISSION

The following is based on information extracted from primary and secondary sources largely originating from archival repositories. The paucity of primary sources, however, does not permit the creation of a definitive history of the Elmbank/Fifth Line Mission. This text should therefore be considered a provisional version of the Elmbank/Fifth Line Mission history.

In the early 1800s, the first pioneers arrived in the south part of Toronto Township, County of Peel, in search for a place to raise families and make a decent living. Very fertile farmland attracted the

early settlers to the area, now encompassing parts of Brampton, Mississauga, and Etobicoke; and this permitted the erection of productive farms raising livestock (cattle, horses, sheep and hogs) and the export of grain overseas to England. In 1818, land was purchased from the Mississaugas in order to accommodate the influx of immigrants and a “New Survey” of land was annexed to Toronto Township. By 1819, the first settlers of the Malton area began the establishment of farming communities. Catholics were among the early population and rapidly united to form the early congregations of Toronto Township. Although most Catholics were of Irish descent, evidence of British and French and even German Catholics can be found.

Land clearance in the fifth concession began in 1824. This ultimately led to the establishment in the early 1830s of one of the earliest and most important Catholic missions in Toronto Township, located on a parcel of land between the Fifth Line and the banks of an Etobicoke Creek tributary. The mission was known by several names over its close to 100 year existence: The Fifth Line church, Elmbank, St. Bernard’s, St. Patrick’s, St. Kevin’s, St. Peter’s, and Sacred Heart of Jesus (Gilchrist 1981:2). It appears the mission began serving Catholics in what later became known as the Parish of Dixie circa 1830, when a frame church was erected on the Fifth Line by Father Edward Gordon (Bull 1939:178). The mission was located on the south half of Lot 8, Concession 5, in the New Survey of Toronto Township, on land occupied by Bernard and John McGuire. In November of 1837, they signed a contract with Bishop Alexander MacDonnell and two other trustees of the Catholic church. For the nominal sum of five shillings, the trustees took possession of two acres for the use of a “church, graveyard and presbytery” (Bull 1939:178). One year later, according to the Abstract Index to Deeds for Toronto Township, the Roman Catholic Episcopal Corporation officially received a Crown patent for their two acres on Lot 8.

Father Gordon, based at St. Paul’s Church in Toronto, served the Catholic farming population by travelling from community to community. Other names connected to the parish were the Reverend Peter Polin, himself probably stationed at St. Paul’s Church in Toronto, who served the mission from 1836 to his sudden death on April 8, 1837. Father Polin was buried under the alter of the first mission church (Bull 1939:182). Father Eugene O’Reilly succeeded him and also administered to the entire County of Peel between 1844 and 1856 (Treacy 1909). Extant histories of the parish are not explicit as to whether a rectory indeed had been built by these men, although the intent to construct one was stated in the indenture between the church and the McGuires. In nineteenth-century rural Ontario, it was customary for missions to have a church for the Liturgy and the Sacraments, a rectory for visiting clergy, and a cemetery for the sacred burial of local Catholics. A people living on the land, adjusting to the harsh realities of the environment (difficult transportation, weather, and living conditions), and seeking solace, founded rural missions with the capacity to provide all religious needs. Hence the existence of a church, rectory and cemetery in many rural missions.

John McGuire himself did not receive a patent for the remaining 98 acres on Lot 8 until 1845. The farm remained in the McGuire family after John’s death in 1849 (Toronto Township Deed Instrument #33455), and they continued to occupy a log cabin according to the 1851-52 census. The

census further listed on the property a Roman Catholic chapel of frame construction that seated about two hundred persons, and no mention was made of a rectory. The location of the original McGuire homestead in relation to the church was not specified, and the 1859 Tremaine map of Peel County only illustrated the church adjacent to the Fifth Line and no structures related to the McGuires on the south half of Lot 8. By 1861, James McGuire occupied a brick house (MPA 1991:90) and it likely corresponded to the structure illustrated on Lot 8 south of Etobicoke Creek on the 1877 *Atlas* (Figure 2). North of the creek, a cemetery, church and unspecified structure (probably the rectory noted below) were shown in the northeast corner of the property, then occupied by “George Garbutt.”

In 1856, it was recorded that the Reverend McNulty served the mission and that he built “the priest’s house at the Fifth Line” (History of Dixie Parish n.d.:9). Prior to that time, the visiting priests in charge of the mission may have boarded with a local family, perhaps the McGuires. McNulty was succeeded by the Reverend John O’Shea, whose charge included six stations: Streetsville, Irishtown, Claireville, Malton, the Fifth Line and Weston (History of Dixie Parish n.d.:11). According to the History of Dixie Parish (Treacy 1909), O’Shea chose to live at the Fifth Line rectory although one also existed at Streetsville. Father Flannery also lived at the Fifth Line rectory circa 1861 to 1866 (Treacy 1909).

For the first 60 years, the Elmbank/Fifth line mission was vibrant. In the 1850s, 400 individuals attended Mass regularly, some people travelling from as far south as Port Credit and as far north as Bolton. Mass was most often celebrated every two weeks. The first Confirmation at Elmbank was administered in 1835 by Bishop Remi Gaulin, Coadjutor to the Bishop of Kingston. Bishop Michael Power visited the mission during its early years, in 1844 and 1845. The original wooden church was replaced eventually by a red brick structure under the direction of the Reverend Edward Cassidy, and Archbishop John Joseph Lynch officiated at its blessing and dedication in 1885 (Treacy 1909). The cemetery, as was customary for rural churches of all denominations at that time, was by the church, and grew naturally with each burial. In the 1930s, when William Perkins Bull (1939:178) researched the Fifth Line church, he noted that upwards of 300 graves were extant in the cemetery, with the burials haven taken place, for the most, in the nineteenth century.

In time, the mission’s population declined as the result of old families moving and young people leaving to seek opportunities in the larger centres. The church, along with two masonry structures, were illustrated on a series of early twentieth century NTS maps (1909, 1931 Brampton sheets), however, there is no record of Mass being celebrated at Elmbank after 1915 (Bull 1939:178). Although no precise date can be ascertained as far as the closure of the Mission, the church, and presumably the rectory, were demolished in 1932. After demolition, the raw materials and elements (stained glass, pews, and even the bricks) of the physical church were used in other churches. The cemetery appears to have been used until at least 1937. From 1938 to present day, the Elmbank/Fifth Line cemetery has been incorporated within the Lester B. Pearson Airport property.

4.0 GENEALOGICAL RESEARCH

The purpose of the genealogical program was to identify descendent(s) of the deceased in order to consult with them on the relocation of the remains. This was an ongoing process, beginning with the 277 people who were known to have been buried in the cemetery, as determined on the basis of tombstone records, burial records, death notices, obituaries, and other archival sources (Appendix 1), but expanded as interments for which no records survive, but which were identified based on coffin plates etc., were documented during the archaeological excavations.

The first step in the genealogical research was to place notices in both secular and Roman Catholic newspapers, as well as in parish bulletins in order to contact anyone who was aware of the fact that their ancestors were interred at Elmbank.

In order to locate any direct descendants, a number of searches were undertaken, starting with the “Last Will and Testament” or “Letters of Administration” of the deceased. The search then focused on the heirs that are mentioned in these documents, tracing them through census records or death notices in a newspaper or through their identification on gravestones in other cemeteries. A myriad of records were examined to construct individual family profiles. Such records include, among others, civil registration of births, marriages, deaths, census, wills, newspapers, religious registers of baptism, marriage and burial as well as newspaper files for birth, engagement, marriage or death notices. As well, the Canadian Federal decennial nominal census records up to 1901 were searched as were city directories and other types of land records. Often these records are neither centrally housed in any one archive or repository, nor easily accessible for reference. They are rarely on the Internet. The required records, when found, are most likely not indexed, and usually must be searched manually.

More than 1500 descendants were documented, while approximately 150 living descendants, either direct descendants or collateral relations, were contacted, each of whom in turn disseminated information to family members, usually their children, siblings, aunts, uncles or cousins. Such people often have documentation that would not otherwise be readily available – for example, family Bibles, letters, diaries, military papers, education documents, photographs, etc.

The genealogical project was both time and research intensive. There is no "master" plan - only that the research proceeds from the known to the unknown. One piece of evidence is found, leading to the next, and so the process is continued until a fairly comprehensive outline of a descendant tree is developed.

While the vast majority of those interred at Elmbank were of Irish descent, some burials are of people whose families are of Anglo-Irish, German and Austrian origin.

5.0 SALVAGE EXCAVATION OF THE RECTORY AND SECOND CHURCH

5.1 Introduction

The first phase of the archaeological investigations entailed the use of an optical transit to establish a five metre square recording grid, referenced to a permanent datum labelled 500-200, across the surface of the site (Figure 3). All mapping and recording activities subsequently carried out during the project were based on this grid.

This was followed by the excavation of 20, one-metre square test units across the estimated areas of the demolished rectory and the 1885 brick church (Figure 3) in order to more precisely locate their positions and to determine the character and extent of cultural deposits in the topsoil overburden. All soil fills were screened through six-millimetre wire mesh to facilitate artifact recovery. The subsoil was trowelled and all profiles were examined for undisturbed cultural deposits.

A total of six topsoil test units was excavated in the vicinity of the rectory. The distribution of building components and domestic artifacts, such as ceramics and container glass, recovered from these units allowed the former location of the structure to be estimated with considerable confidence. Fourteen test units were excavated in the topsoil east of the rectory, across the area estimated to contain evidence of the church. All of these units proved to contain a mix of nineteenth and twentieth-century artifacts and the soil profiles in many of the units indicated that considerable topsoil disturbance had occurred within this portion of the site. This was probably as a result of landscaping and cleanup activities that took place in the overgrown churchyard in the 1960s.

A further attempt to pinpoint the location of the church through the completion of a resistivity survey was also undertaken. In the end, however, its precise location was established based on subtle variations in surface topography and vegetation which only became apparent as the setting sun cast long shadows across the slight central depression of the building's foundations. Further resistivity testing and limited hand-excavations at the margins of the depression confirmed the survival of at least part of the foundation.

Comprehensive salvage excavations at the rectory and church were then initiated in order to sample, inventory, identify and describe the archaeological resources associated with these structures. The excavations entailed the removal of the topsoil within each site area by means of a Gradall equipped with a smooth-edged bucket. The exposed subsoil was then carefully examined for the presence of subsurface features. These features were then defined more precisely with shovel and trowel, and their locations were recorded within the overall grid. All features were cross-sectioned to examine soil profiles and contents. In addition, feature plans and profiles were photographed, and mapped at a 1:10 or 1:20 scale as appropriate. The fill removed from each feature was screened through 6 mm mesh to optimise the recovery of small artifacts, and the artifacts were bagged with reference to the feature number.

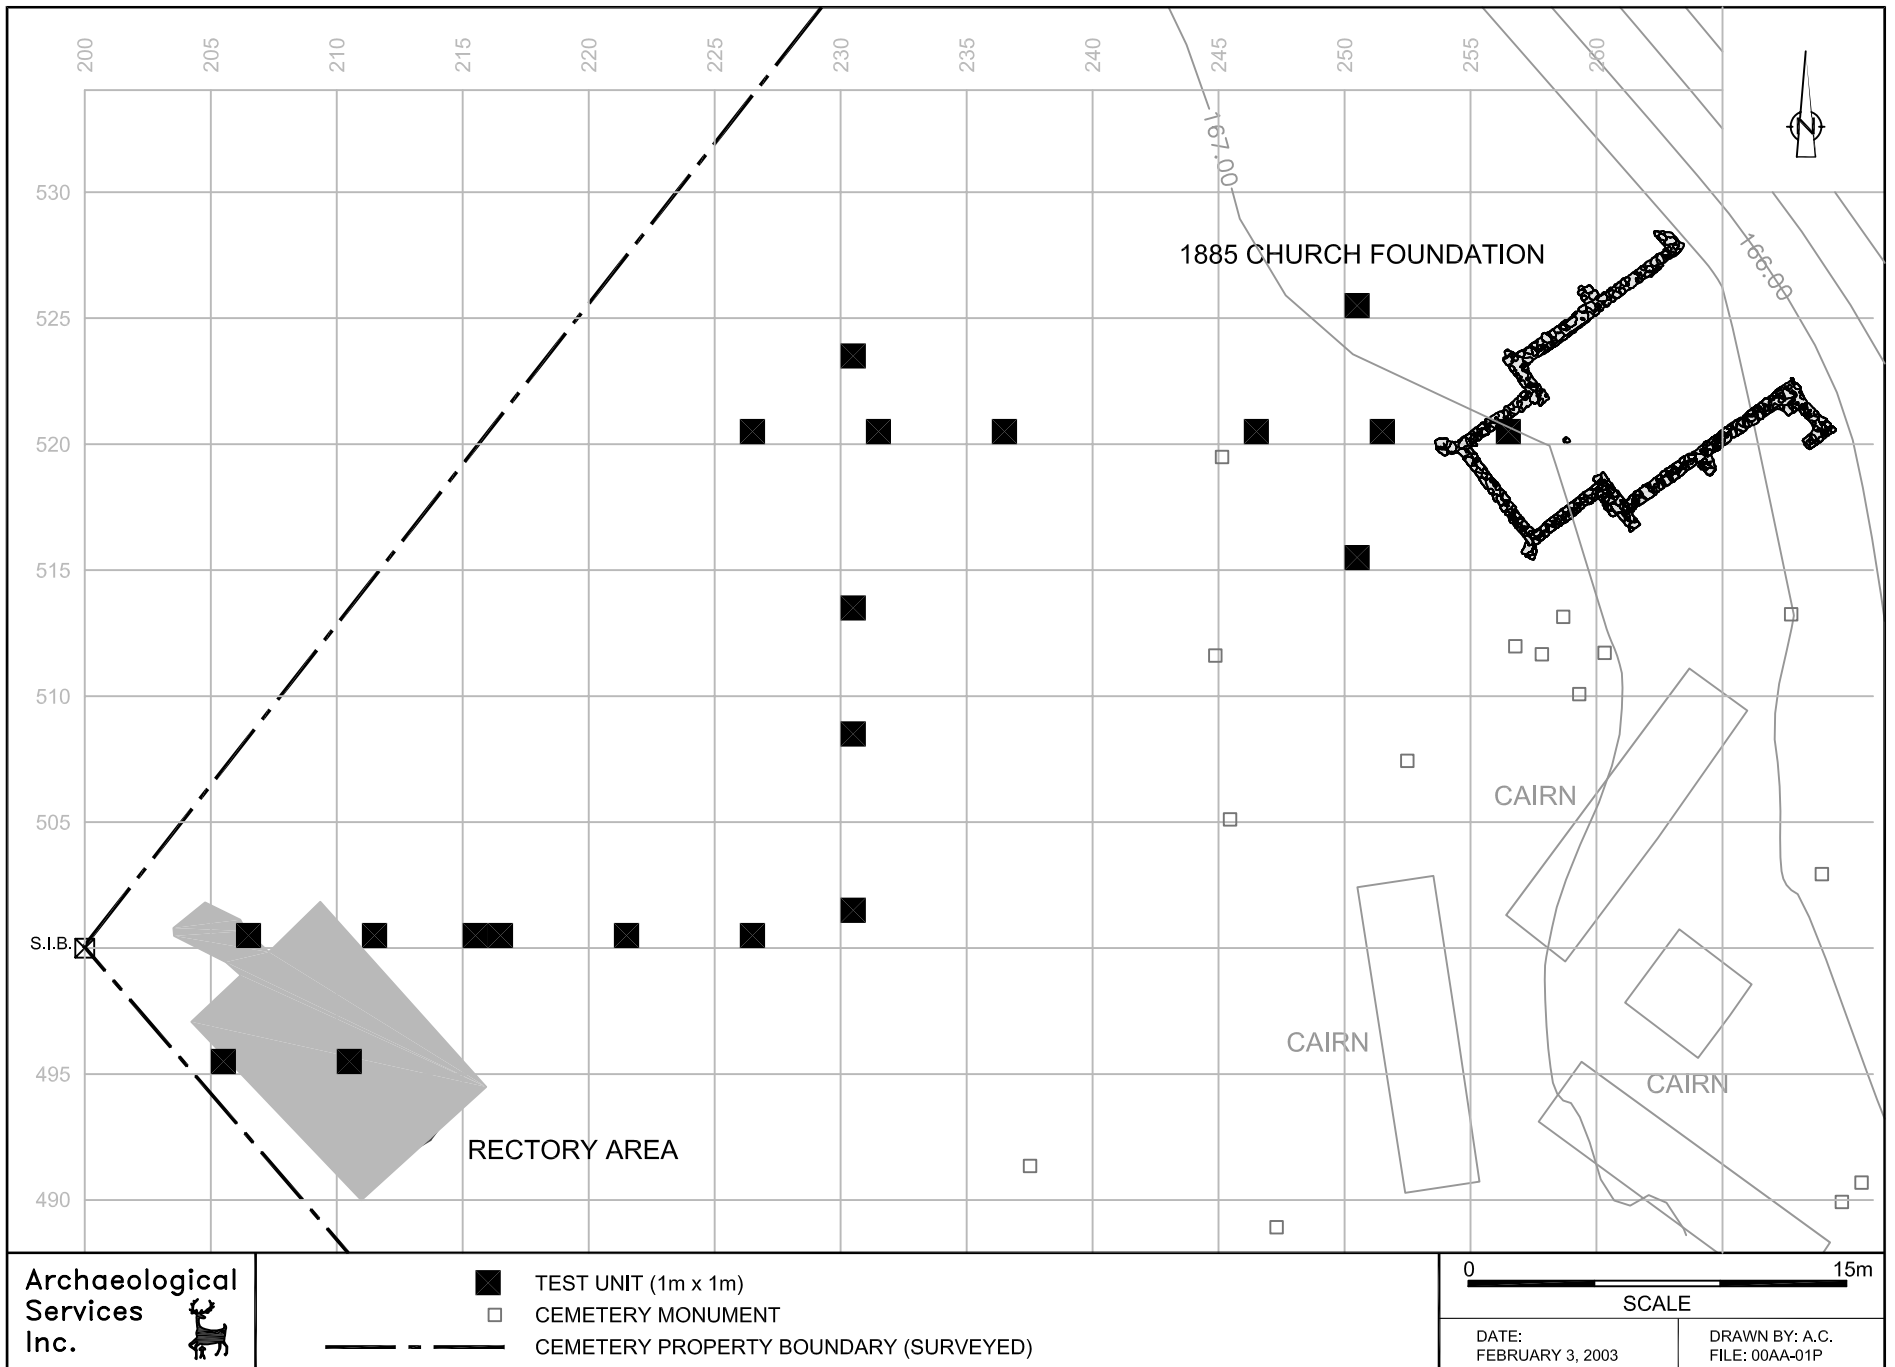

Figure 3

The Results of topsoil testing at the Elmbank mission Rectory and 1885 Church

All artifacts recovered during these processes were retained, washed, labelled and catalogued as to specific provenience using the Archaeological Services Inc. artifact processing database system. An itemized catalogue by provenience was produced for each site, which serves as the basis for the detailed analyses provided in this report. Inventories of the various artifact classes are provided herein (Appendix 2).

No features that could be definitively associated with the first frame church established on the site in 1830 were encountered during the course of the excavations. It is possible that a broad area in the eastern portion of the cemetery that was devoid of graves (Figure 4) represents the location of the first church, since many of the earliest burials surround this grave-free zone. No evidence was found, however, of the “small iron cross” said to mark Father Polin’s grave, although Brian Gilchrist documented a possible candidate for this marker in his cemetery transcription for the (OGS 1981).

It should also be noted that no domestic features that could be associated with the McGuire family’s log cabin were found during this process. It can be assumed, therefore, that the domestic artifacts found in topsoil units placed 30 metres to the east of the rectory, in the vicinity of the 1885 church foundations, originated with the occupation of rectory, but were redistributed during clean up activities in the churchyard in the 1960s.

5.2 The Rectory

Located in the extreme western corner of the property (Figure 4), the remains of the rectory consisted of a complex of four shallow features (Figures 5 and 6). Feature 1, a roughly rectangular stain of dark soil that measured approximately ten metres in length and seven metres in width represents the basic outline of the building, which was oriented northwest-southeast. It was built without substantial foundations. Rather, the building likely rested upon footings or sill beams laid directly on the contemporary ground surface. After the building was demolished, the surrounding midden soils were probably pushed into a depression created by the building. Segments of planking that survived in three locations along the margins of this feature may represent the remains of sills, while two wooden posts preserved along its northern periphery are the vestiges of support elements for the superstructure. Symmetrical concentrations of mortar at the northwest and southeast ends may be evidence of where the chimneys were located.

A total of 30 one-metre units was excavated within Feature 1, yielding large quantities (Table 1) of mid- to late nineteenth-century domestic debris (ceramic and glass tableware, utilitarian kitchen ware, animal bones), architectural remains and personal and clothing items such as smoking pipes and buttons (Appendix 2).

Feature 2, located along the central axis at the southeast end of Feature 1 represents a shallow, rectangular pit excavated into the underlying subsoil. It measured approximately 100 cm wide, and over 150 cm in length, with a depth of approximately 30 cm. The fill of this feature, which consisted of three separate layers that contained varying concentrations of mortar and topsoil, contained extremely large quantities of artifacts (Table 1). In addition to typical domestic debris, several more notable finds were recovered from Feature 2, including rosaries, flintlock musket parts, and a molded Parian ware wall plaque of Jesus executed in the manner known as “The Risen Saviour”. The overall size and form, its location within the house close to a fireplace, and the presence of artifacts contained as a secondary fill deposit suggest that the feature functioned as a root cellar (MacDonald 1997:64).

Features 3 and 4, located to the immediate southeast and northwest of Feature 1, respectively, and each of which consisted of concentrations of brick rubble that extended into shallow depressions cut into the subsoil, may represent the remains of fireplaces. Neither of these features yielded significant artifactual remains.

A rich and varied assemblage of close to 4,000 artifacts was recovered from the six topsoil units and four features (Table 1). A modified version of the Canadian Parks Service “Classification System for Historical Collections” (Canadian Parks Service 1992) was used to organize the site data to facilitate comparison of the assemblage with that of a typical nineteenth-century domestic farmstead, and to identify differences that might denote a different type of occupation. It should be noted that no sites of this type have been published in Ontario that would permit a direct comparison with the Elmbank assemblage.

Overall, ceramics, container glass, and table glass, which comprise the Kitchen/ Food Class of artifacts, make up approximately 24.9% of the assemblage excavated at the rectory (Table 1). This fits within the range calculated for this class of artifacts on 15 nineteenth-century rural farmsteads excavated by ASI in southern Ontario (MacDonald 1997:Table 4). Of the ceramics, approximately 28 individual ceramic vessels are represented in the rectory assemblage: five teacups, seven saucers, one tea pot, three plates, three jugs, one bowl, one crock, one milk pan, two lids for undetermined vessel types, one ewer, one ointment pot, and two inkwells. These are decorated in a variety of manners (Table 2) and represent a wide variety of domestic activities, including food and beverage consumption, food storage, food preparation, hygiene, use of medicine, and writing. The number of vessels recovered from sites can be variable and relates to the socio-economic standing of the occupants, length of occupation, and site formation process, among other factors. The Elmbank assemblage is considerably smaller than Ulsterman (AJGw-258), occupied for thirty years by a Toronto Township family, and which contained a minimum of 57 vessels (ASI 1999), but compares well with the Log Cabin site (AlGu-107), which contained 34 vessels from 40 years of occupation in Vaughan Township (ASI 1995).

Table 2: Frequency of Decorated Ceramics in Features 1 and 2

Feature #	Decoration	Qty.	%	Feature #	Decoration	Qty.	%
Feature 1				Feature 2			
	Straight Blue Edge	1	0.8%		Brown Transfer	24	9.5%
	Blue Floware	2	1.7%		Blue Floware	1	0.4%
	Yelloware w/Rockingham glaze	1	0.8%		Yelloware w/Rockingham glaze	31	12.3%
	Plain Pearlware	5	4.1%		Plain Pearlware	171	67.9%
	Fine Blue Sponge	67	55.4%		RWE, Late Palette	3	1.2%

Total Ceramic Sherds - Feature 1				Total Ceramic Sherds - Feature 2			
		121	100.0%			252	100.0%

Printed or impressed maker's marks found on the vessels help to establish a date range for the site occupation. Two marked vessels found in topsoil units include a mended blue floware dinner plate in the Lotus pattern (Plate 1) marked "RC & Co.," which denotes R. Cochrane & Company of Glasgow circa 1846+ (Godden 1991:157), and an ironstone ewer from a toilet set with the phoenix symbol of the Clementson brothers, Staffordshire, circa 1865-1916 (Godden 1991:150). Feature 2 contained two marked vessels, a mended brown transferprint saucer in the Fibre pattern marked "JJ," which denotes J. Jackson & Company of Yorkshire circa 1870-1887 (Godden 1991:349), and a complete ironstone ointment pot with an impressed mark "JOSEPH ...TT & Co. TORONTO," which indicates Toronto chemist and druggist Joseph Beckett circa 1846-1857 (Phillips 1989:178).

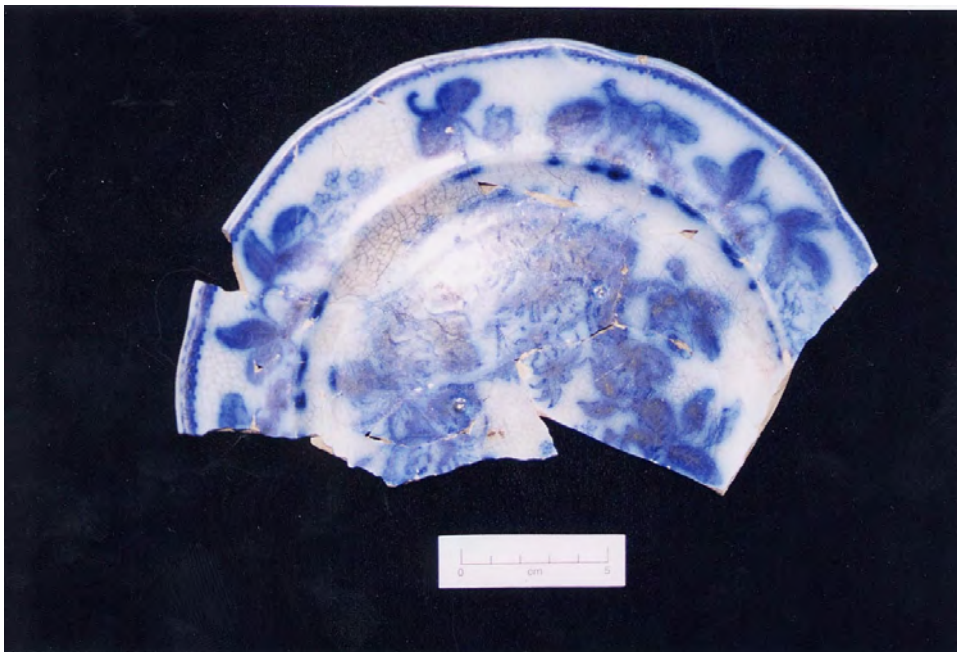

Plate 1: Reconstructed flow blue plate recovered from the Rectory.

Container glass was also common in the assemblage and numerous complete or mended bottles also provide occupation date ranges. One complete bottle recovered from a topsoil unit contained molded panels with the words "Burdock Blood Bitters//T. Milburn & Co.//Toronto" and can be dated to circa 1892 (Phillips 1989:197). Feature 2 in particular contained a minimum of 17 different bottles, mainly medicine or toiletries, but also one Crown canning jar. Products included "Milburn's Cod Liver Oil Emulsion," "Ayer's Sarsaparilla Compound Extract," a cure for scrofula (a tuberculosis of the lymphatic glands) advertised circa 1848+ (Fike 1987:214), "Dr. Chase' Syrup of Linseed and Turpentine," and "David's Cough Balsam." While these bottles can be interpreted as evidence of the types of ailments that priests or parishioners occasionally suffered, bottles also were commonly recycled in the nineteenth century and may have been brought to the site with different contents (Busch 1991). A good example of this is another Ayer's Sarsaparilla Compound Extract bottle interpreted as holding holy water that accompanied Burial 193 in the cemetery (see Appendix 11).

Nails, window glass, and architectural hardware comprise the Architectural Class, which represents approximately 35.3% of the assemblage (Table 1). This also fits within the above noted range. The high frequency of nails and window glass recovered in Feature 1, and hardware such as three ceramic door knobs deposited in Feature 2, suggests that a portion of the house was allowed to decay after it was abandoned. A small number of hand wrought nails were recovered, and denote a structure built during the first half of the nineteenth century. The majority of nails are machine cut, and indicate a structure maintained from the 1830s to circa 1900, after which time wire wound nails began to be manufactured in common supply (MCC 1982).

The Personal Class (23.9%) includes items of clothing, adornment, smoking pipes, coins, and personal hygiene such as hair combs. The relative frequency of this class of artifact is well above the range calculated for a sample of domestic sites in southern Ontario (MacDonald 1997:Table 4). In particular, over 350 smoking pipe fragments were recovered, many of them mended into complete pipes (Plate 2). Pipes are also useful for dating and the most common marks found on stems are “Bannerman/ Montreal” (1857-1907), McDougall/ Glasgow (1846-1867), and Dixon’s/ Montreal (1876-1894) (Kenyon 1984). Two small crucifix pendants, possibly from rosaries, were also recovered, one glass and one brass (Plate 3), along with a complete string of small rosary beads found in Feature 2. A TPQ date of 1896 is obtained for Feature 2 based on a silver Canadian 5 cent piece.

Tools and equipment representing a variety of domestic and agricultural activities comprise approximately 8.8% of the artifact assemblage (Table 1). These include sewing thimbles, a sickle blade fragment, farrier’s tools, horse harness hardware and horseshoes, and parts of two flintlock muskets. This class of artifact is also above the range calculated for a sample of domestic sites in southern Ontario (MacDonald 1997:Table 4). A small amount of faunal bone (3.3%) is present in the assemblage (Table 1). This figure is lower than the range calculated for 15 nineteenth-century rural farmsteads excavated by ASI in southern Ontario (MacDonald 1997:Table 4), however, the variable preservation of fragile organic material may explain the low frequency. It is also true that faunal bone is better preserved when it has been deposited in deep features such as root cellars or privy vaults (MacDonald 1997:74).

Household furnishings comprise approximately 2.6% of the assemblage (Table 1). Perhaps the most interesting item in this class is an almost complete “Risen Christ” wall plaque made of molded Parian ceramic found in Feature 2 (Plate 4). It, along with the personal religious items noted above, speak to the devout nature of the site occupants.

Plate 2: Selected smoking pipes recovered from the Rectory.

Plate 3: Crucifix recovered from the Rectory.

In summary, the artifact frequencies in the rectory assemblage resemble some aspects of a domestic household, while others do not. There is good evidence for a wide range of domestic activities associated with the maintenance of a household throughout the second half of the nineteenth century, based on the dates and functions assigned to the artifacts. These can be associated with at least three priests who lived, if intermittently, at the Fifth Line/ Elmbank mission rectory between 1856 and the 1880s.

The most striking deviation from the ranges calculated for artifact frequencies in southern Ontario is in the Personal Class of artifacts. On a typical rural farmstead, these are artifacts interpreted as those used and discarded by members of an extended household. An increase in this class would denote, therefore, a greater number of people visiting the site. This would be plausible at this site as the rectory would have been visited frequently when the mission priest was in residence, and the building may have been the place where wedding parties, wakes, or other community functions took place. Thus, it is suggested that an increase in this class of artifacts relative to the others will be a useful signature for other Ontario researchers analyzing nineteenth-century rectory assemblages.

Plate 4: Risen Saviour wall plaque recovered from the Rectory.

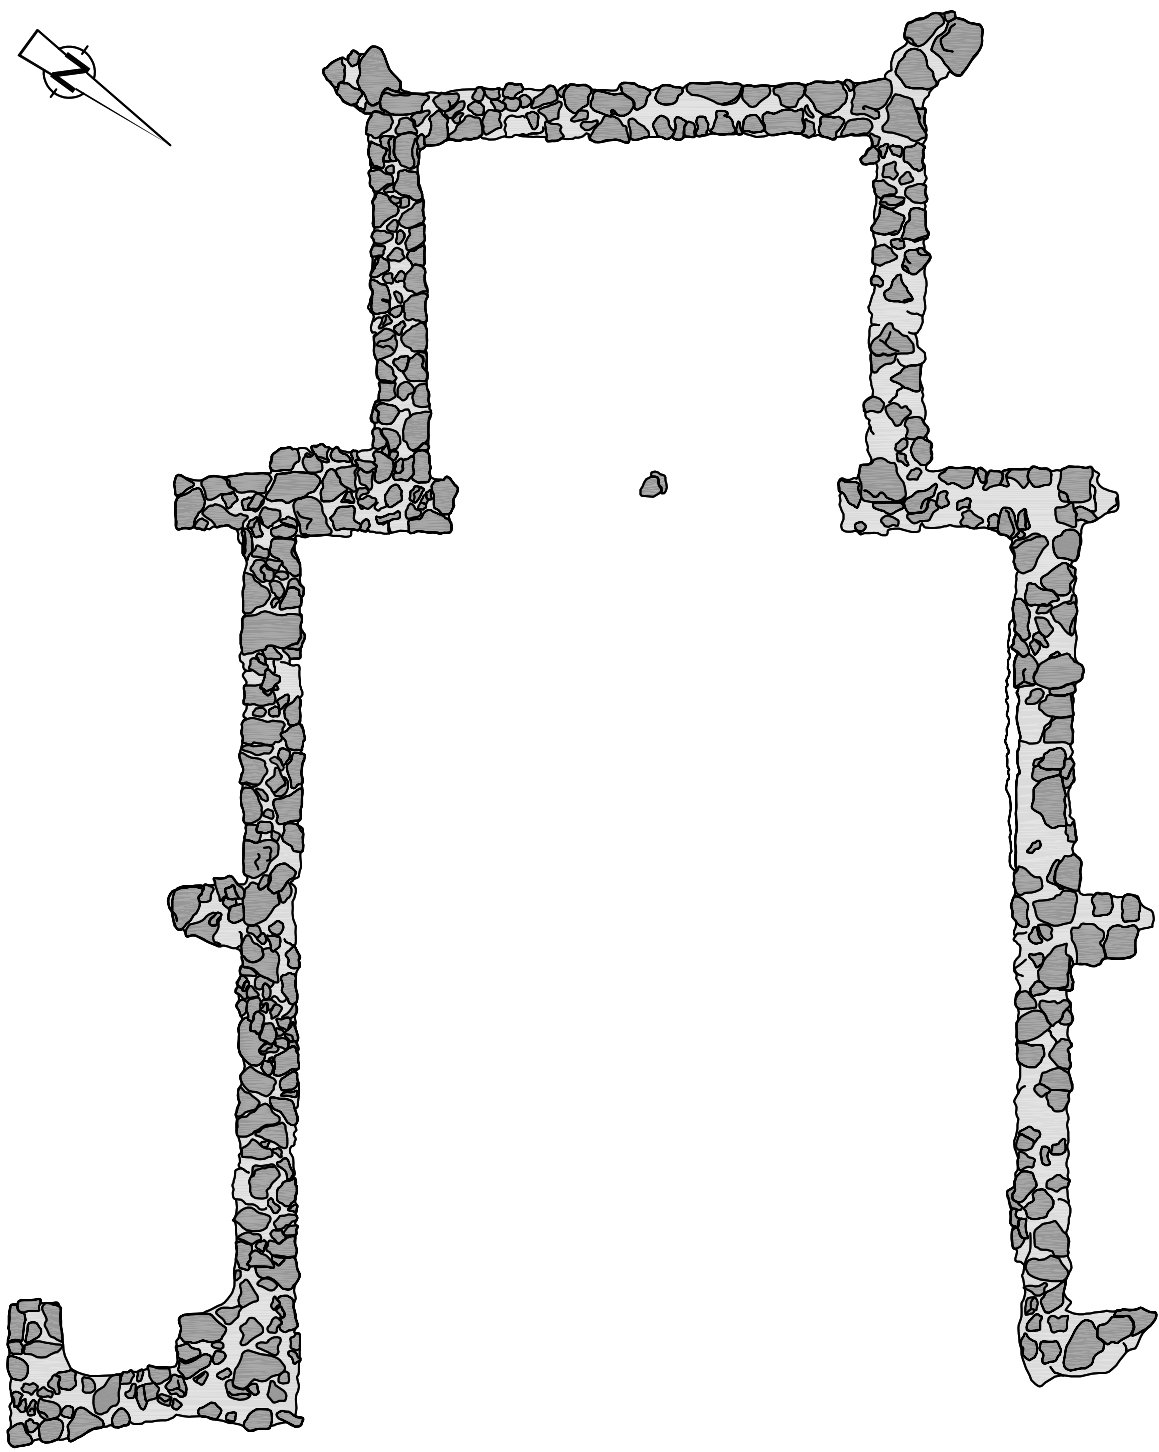

5.3 The 1885 Brick Church

Located on the east side of the cemetery and (presumably) fronting Fifth Line Road (Figure 3), the brick church was built in 1885 and, according to 1888 insurance records, stood as a 52' by 26' (15.9 m by 7.9 m) structure. The remains uncovered through hand and mechanical excavation (Figure 7, Plates 5 and 6), which are limited to the lowermost three courses of the mortared stone foundation of the westerly portion of the structure, measure 12.5 metres in length and 7.5 metres in width and are oriented northeast-southwest. It is clear that the design of the church included decorative brick buttresses. The easterly portion of the building had been destroyed by grading which took place in this portion of the site during the widening of Fifth Line Road, but it is clear that the building exceeded the length reported in the insurance records. This fact, together with the fact that no drawings, photographs or detailed descriptions of the building were uncovered during the historic and genealogical research, hindered interpretation of the remains.

Assuming that the church fronted the road, then the surviving portion of the structure represents the chancel and part of the nave. There are, however, several difficulties with this interpretation. Foremost is the configuration of the extreme eastern portions of the foundation, which suggests that the church was built according to a cruciform plan, or at least included a third, larger cell. If this were to be the case, then the bulk of the nave, together with the transepts—however long they may have been—the narthex and portico have been lost. Given the usual proportions in which cruciform churches were built, however, then the structure must have greatly exceeded 52 feet in length, as the nave generally constitutes the largest portion of the building.

If, on the other hand, the entrance to the church did not face the road, which on the whole, seems somewhat unlikely, then the surviving section represents the portico or narthex and the rear of the nave.

A stone well was discovered a short distance to the northwest of the church, and a segment of a drain was found to its immediate southeast, however, no other features associated with the church had survived. A mix of architectural and domestic artifacts were recovered from the topsoil units in the area of the church, including fragments of stained glass and lead (see Appendix 2). It is likely that much of the domestic material was redeposited from the rectory middens during landscape and cleanup activities that took place in the churchyard in the 1960s.

6.0 EXHUMATION AND RE-INTERMENT OF THE HUMAN REMAINS

The use of archeological techniques during the disinterment of human remains is provided for in the Regulations of the *Ontario Cemeteries Act* (Revised). The controlled excavation of a cemetery's precinct allows for the respectful documentation of known burials as well as the discovery of any additional graves that are not marked above ground, a frequent occurrence on abandoned burying grounds and cemeteries.

6.1 The Exhumation Process

In order to determine the location and orientation of burials, topsoil and/or fill overburden was removed with the aid of a Gradall. Equipped with a fully-flexible arm and bucket, such a machine works with precision to avoid disruption of the grave shafts. The topsoil overburden was removed to the level of subsoil where the outline of grave shafts became evident. In many cases, however, the previous alterations to the grade of the cemetery resulted in the removal of most of the upper portion of the grave shafts. Many interments only became visible at the point at which the lid of the coffin was exposed. Each grave was then photographed and recorded in plan view relative to fixed data points and the excavation grid established for the site. The limits of the cemetery were established through stripping towards the periphery of the site and a ten to fifteen metre wide burial-free zone was established.

The soil fills of grave shafts were then carefully removed by hand excavation and Gradall. Once human bone was encountered in each grave shaft, a trench was hand-excavated around its perimeter thereby creating a pedestal to allow the archeological team to investigate the grave shaft without disturbing the delicate bone. The skeletal remains were fully uncovered in place and photographed. The horizontal and vertical locations of all gravestone fragments, personal artifacts and coffin hardware were recorded. Two bundle burials were documented (Plate 7).

Preliminary assessments of age, sex and any obvious medical problems were also be recorded at this time. The process of exhumation involved the labelling and packaging of individual bones or groups of bones labelled by individual, which expedited the subsequent collection of skeletal data. This information was required in order to separate persons buried within the same grave shaft, and to ensure that identifications

Plate 7: Bundle burial excavated at Elmbank Cemetery.

made from historic documents, monuments, and/or coffin name plates coincided with the associated remains, the sex, age at death, and overall health status as determined for the skeletal elements recovered.

A trailer acting as a temporary morgue was established on-site to ensure that the skeletal material remained safe and to allow for the skeletal inventorying to be undertaken on-site.

6.2 Inventory of Human Remains

6.2.1 Introduction

A total of 634 burial shafts was identified and excavated. A total of 622 individuals were documented and exhumed, two contained insufficient material to assess the nature of the associated individual and an additional ten graves proved to be empty (Appendix 3). While it is likely that most of the empty graves represent interments whose remains were removed by family members upon the closure of the cemetery, it is possible that, in a least one instance, greater subterfuge was involved. In a letter of November 23, 1867 to the Right Reverend J. Lynch, Father Andrew Finan reported that:

A certain James Loftus, once a Catholic, died in this mission about twelve months ago...Father Flannery permitted his remains to be buried in that part of the cemetery reserved for the unbaptized. A few nights ago, his brother, it is suspected, with some others exhumed the body and buried it with another brother of his in the consecrated part of the cemetery where he intends erecting a monument to both under the pretext that it would be too expensive to erect two since one would [illegible]. My Lord, what am I to do in the matter?

No James Loftus has been identified among the interments, nor has the area of unbaptized burials been identified based on the analysis.

The coffin hardware (Appendix 4) and personal belongings (Appendix 5) of 624 burials where present, were subjected to analysis. A total of 23,794 artifacts was documented in the burials (see Section 6.3). Evidence found among the burials suggests that the cemetery was in active use from 1857 through 1937,¹ however, archival research indicates that the first burial occurred in the year 1833 (see Section 3).

¹ The earliest documented burial is that of Ellen Owen (**Burial 209**) who died in her early twenties in 1857. The most recent documented burial is that of John Joseph Heydon (**Burial 415**) who died at age 69 in 1937.

6.2.2 Demographics

Of the 634 excavated burials, it was possible to determine in 622 of the cases, to varying degrees, a biographical profile of the deceased individual. This information was compiled from a combination of databases containing information on the osteological evidence as well as information recovered from name plates on coffins or caskets and headstones. Only the recovery of DNA from the bone tissue could have definitively proven a familial relationship, but this analysis was not permitted under the terms of the closure stipulated by the Cemeteries Registrar despite that wishes of many of the descendants. Overall, however, it was possible to identify 138 individuals as they were interred in coffins which bore name plates (Appendix 6). Eighty-five of these individuals were known to have been interred in the cemetery on the basis of historical documentation, while an additional seven were known from monument inscriptions. Thus 46 individuals were identified among the 622 burials on the basis of archaeological evidence alone.

Aging and sexing of skeletal material by physical anthropologists provides an estimate of the age of an individual at death based on a series of osteological criteria. These criteria include dental eruption, dental wear, age related pathologies, bone morphology, and the fusion of longbone epiphyses and cranial sutures. Unfortunately, these methods can be limited in their usefulness due to several factors. First and foremost, they require excellent preservation of the skeletal material and particularly of the more delicate parts of the human skeleton. Furthermore, while the age ranges at which these age-related events occur are known for entire populations, they are not necessarily reflective of the exact age-at-death of any given individual. For instance, in numerous cases at Elmbank, individuals were assigned osteologically determined ages that were different from those provided by the documentary evidence seen on headstones and name plates.

At the most basic level, it is relatively easy to distinguish between immature (fetal, newborn, infant, children and adolescent) individuals and mature ones (adult and elderly). As a result, 622 of the burials were identified to this level. Roughly two-thirds (n=404) of the individuals in the cemetery were mature (Figure 8).

On the other hand, 602 of the individuals were assigned to a more specific age category with a reasonable degree of confidence. A total of 139 individuals was identified as elderly (over 50 years in age), 251 were classified as adults aged between 18 and 49, 18 were adolescent (13-17), 107 were children aged from one to twelve years, 56 were infants of less than a year in age, 25 were newborns of less than a month, and 6 were fetal (Figure 9).

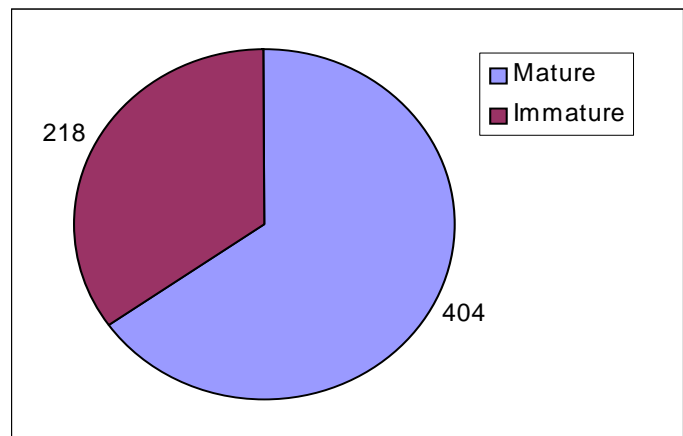

Figure 8: Mature vs. Immature burials

While these age categories were assigned on the basis of the osteological and documentary evidence or a combination of the two, there were a number of complicated cases. In the case of 20 individuals who were difficult to age osteologically and for whom there was no documentary evidence, two categories, adult/elderly (n=14) and adolescent/children (n=6) were created. Fourteen individuals were mature and could be either older adults or senior citizens and six individuals were immature and could either be older children or younger adolescents. While their numbers are not included as part of the discussion of overall demographics,

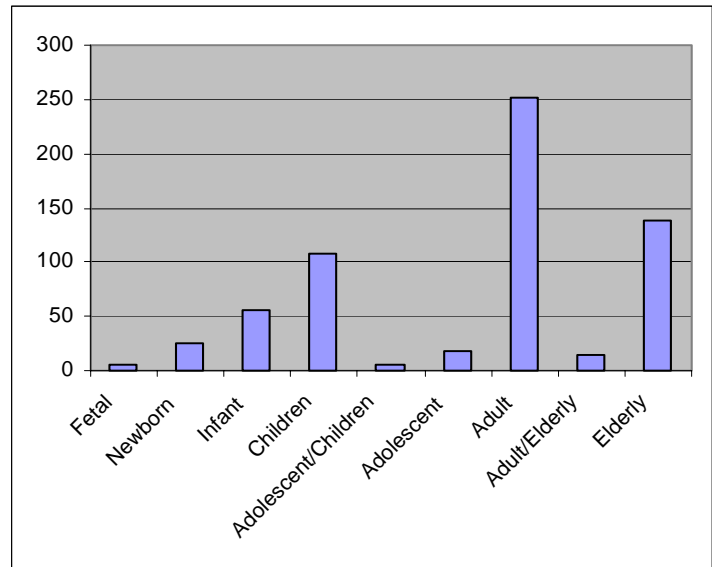

Figure 9: Burials by age category

they were figured into the analyses of the various artifact classes and discussions of the skeletal population often resulting in ranges for adults and elderly rather than absolute numbers. Also, where differences were present between an osteologically assigned age and one that was otherwise documented, the documented age was used for assigning the individual to an age category.

As can be seen in Figure 9, the bulk of the individuals were adults (n=251). It is interesting to note the small number of fetal individuals, which were accorded burials, and the relatively small number of newborn and infant deaths compared to the population size. It is also notable that many of the elderly individuals had reached quite advanced ages: fifteen individuals died in their eighties, four in their nineties, and one individual (**Burial 149**) is said to have been 102.²

Sexing of individuals is based on several osteological criteria and/or documentary evidence. In several cases, the osteological evidence was insufficient, but documentary evidence was present. Also in several cases, the osteological evidence conflicted with the documentary evidence. Where that was the case, the documentary evidence was assumed to be the correct assignment. Furthermore, due to the immature development of the bone seen in subadults (including: fetal, newborn, infant, children and adolescent) no attempt could be made to assign sex for subadults based on osteological data alone. In the end, only 413 of the burials could be assigned to a category: 216 were conclusively identified as male and 197 were conclusively identified as female. As seen in Figure 10, males slightly outnumber females in the Elmbank population.

² This is based on the inscription on her name-plate (Cat. #.0933) which is unclear and may have been engraved twice.

An attempt to discern whether individual burials were of wealthier individuals was made using the presence of silver in the coffin hardware as an indicator of wealth. Seventy-two of the burials (approximately 12% of the population) included some silver hardware. Silver accoutrements were most commonly found among the elderly (45%). It was never found in the burials of fetal or newborn individuals and was rare in general among subadults. There does not appear to have been a clear pattern in the use of silver over time and it is split almost evenly between men and women.

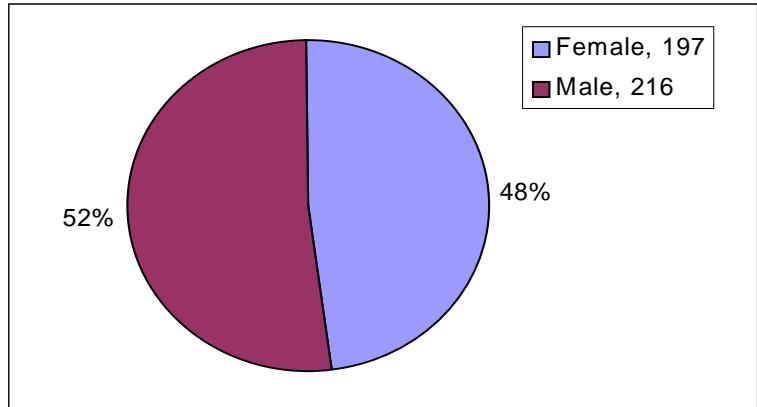

Figure 10: Males vs. Females

There does not appear to have been a clear pattern in the use of silver over time and it is split almost evenly between men and women.

Given that the identities of 491 of the burials remain unknown, consideration of the spatial patterning of the graves (Appendix 7) proved to be necessary in order to reconstruct family groups in order that they might be re-interred together. In general, these multiple burials involved either two stacked adult coffins, or one or two children in separate coffins placed above an adult burial, tentatively suggesting some common kinship link. There were 53 pairs of burials (over or beside one another; some infants over adults) and 32 clusters of burials (comprising 3 to 10 individuals over or beside one another).

6.2.3 Skeletal Analysis

6.2.3.1 Introduction

The observation of disease and traumatic injuries on archaeological skeletal remains provide insight into the overall health status and occupational hazards of the population. By recording the frequency of individuals manifesting certain disease markers, as well as fractures and dislocations, it is possible to reconstruct the everyday struggle endured by the nineteenth-century pioneers buried at Elmbank cemetery.

Specific conditions and diseases, such as osteoporosis, arthritis, tuberculosis, periostitis, and various forms of cancer (both benign and malignant) were observed on a number of adult remains. Some adults, and especially the remains of children, exhibit non-specific signs of chronic disease and/or nutritional stress that cannot be attributed to one specific disease or episode of disease. In addition, many acute infectious agents, such as cholera, do not leave any trace on the skeleton and so their historic incidence cannot be ascertained from skeletal observations. These findings of chronic disease in adults and children are not unusual in archaeological populations that pre-date modern

Western medicine with antibiotic treatment and knowledge of basic hygiene, sanitation, and balanced nutrition.

Numerous instances of fractured bones, arthritis, and spinal column disorders, as well as the robust appearance of the skeletal muscle attachments in many males and females, all indicate a life of hard work for both sexes. This finding mirrors observations of other historic Ontario populations; the Victorian perception of the frail female does not reflect the reality of the Upper Canadian pioneer way of life.

6.2.3.2 Trauma and Pathology

Both adults and subadult skeletons were examined for evidence of trauma and pathology to the bone. In the case of many of the subadults, the bone was poorly preserved and so the only pathology reported in any of the subadults was cribra orbitalia (see the discussion on nutrition below). A total of 199 adult individuals (50% of the population) showed signs of pathology of the bone stemming from disease, malnutrition, or stress. Identified pathologies included: myeloma (bone cancer); scoliosis (curvature of the spine); rheumatoid and osteoarthritis; Schmorl's nodes (a sign of physical stress to the spine); cribra orbitalia (a hallmark of iron deficient anaemia discussed below); healed otitis media (severe ear infections); lipping of the bone; and erosive bone loss. Three individuals had gallstones (**Burials 221, 408 and 413**). Pathologies were evident in 97 female burials (49% of the population identified to sex) and 134 males (62% of the population identified to sex) suggesting a correlation between pathologies and sex. A total of 136 of the "non-wealthy" burials showed evidence of pathology (approximately 26%) while 27 "wealthy" burials (approximately 38%) did. While this might suggest a correlation between such pathological conditions and wealth, the correlation is almost certainly the result of advanced age, which also correlates with wealth.

The skeletal material was also examined for evidence of trauma in the form of mended fractures. A total of 24 adult individuals had evidence of mended bone fractures. Again no evidence was seen in the subadult population due primarily to the state of preservation. All of the individuals showing breaks were sexed and 19 men versus 5 women showed evidence of mended breaks. Among mended breaks, the most common finds were broken ribs (5 individuals) followed by broken tibia (shin bone; n=4) and clavicles (collar bone; n=2). Three individuals also showed signs of blunt force trauma to the skull (**Burials 240, 246, and 270**) while two individuals had amputated limbs (**Burials 073 and 382**). Two of the individuals who showed evidence of mended breaks were considered to be potentially "wealthy" individuals (**Burials 223 and 270**).

While there is little doubt that biomedical practitioners were located in the Elmbank region (The Act of 1839 incorporated the College of Physicians and Surgeons of Upper Canada), in many cases this form of medical care would have been limited by the necessity of time and accessibility. This seems to be particularly the case with traumatic injury, as several poorly set and misaligned (yet well mended) fractures to legs and arms were observed. The fact that many fractures resulted in well knit

bones also suggests a strong extended family presence to take over work duties and thus allow the injured person the opportunity to heal properly. Pioneer settlers were generally left on their own to self-doctor when disease or accidents struck.

It was not uncommon for a local farmer to acquire a reputation as a specialist in some medical area, and perhaps be called upon in an emergency to set a broken limb. Indeed, the biomedical practitioner was summoned only as a last resort, as two out of every three surgical patients died. This was likely due to the shock and post-operative infection experienced in the pre-anesthetic and pre-antiseptic era. However, direct evidence of medical intervention at Elmbank was seen in two cases of amputation (one successful) due to crushing injuries, and three craniotomies (removal of the top portion of the skull to view the brain) performed after death.

Schmorl's nodes are one of the hallmarks of long-term, stress-induced injury to the spine. A total of 110 of 388 adult observable cases (28%) showed evidence of Schmorl's nodes on their vertebrae. Schmorl's nodes were found to be more than twice as common among men (n=75) as women (n=35). Eleven (15%) of the "wealthy" burials had Schmorl's nodes while 41 (8%) of the remainder had them. Again, age may have been the determining factor.

One form of pathology that is evident in the artifactual rather than osteological record is loss of an eye. Two burials (**Burials 293 and 340**; Cat. #s .1783 and .2050) contained glass eyes.

6.2.3.3 Nutrition

Cribra orbitalia, a pathology of the eye socket, is a hallmark of malnutrition (iron deficient anaemia). While not every burial had a sufficiently preserved cranium for analysis, 45% (160) of the analyzable crania showed evidence of cribra orbitalia. As noted above, the only pathology seen in subadults was cribra orbitalia. A total of 74% of subadults with analyzable crania showed evidence of cribra, and therefore malnutrition. The presence of cribra decreases with age of individuals with the elderly exhibiting cribra in only 27% of analyzable cases. Most cases were mild but 21 of 160 were severe. While too few of the skulls belonged to datable burials for a statistically meaningful analysis, evidence of cribra spans burials from the 1860s through 1930s. Cribra was considerably more frequent among female burials (40% of analyzable female crania) than among males (30% of analyzable crania) and tended to be more severe in women (17% of cases). Although cribra occurred in a similar percentage of "wealthy" and "non-wealthy" cases, no severe cases were seen among the "wealthy" individuals.

6.2.4 Summary of Human Remains

A total of 634 burial shafts was excavated at the Elmbank Cemetery site and 622 burials were subjected to analyses. Roughly two-thirds of the individuals in the cemetery were adults. There was a small number of pre-natal individuals who were accorded burials, and a relatively small number of infant deaths given the population size. It is also notable that many of the elderly individuals had reached quite advanced ages. Males slightly outnumber females in the Elmbank population.

Half of the population showed signs of pathology of the bone stemming from disease, malnutrition, or stress. Pathologies were evident in just under half of female burials and 61% of males.

A total of 24 adults had evidence of mended bone fractures. Three individuals showed signs of blunt force trauma to the skull while two individuals had amputated limbs. Twenty-eight percent of adults showed evidence of Schmorl's nodes on their vertebrae. Schmorl's nodes were more than twice as common among men as women. Two burials contained glass eyes.

Just under half of the analyzable crania showed evidence of cribra orbitalia. A total of 74% of analyzable subadults showed evidence of cribra, and, therefore, malnutrition. The presence of cribra decreased with the age of the individuals. Most cases were mild but 21 of 160 were severe. Evidence of cribra spans burials from the 1860s through 1930s. Cribra was considerably more frequent among females than among males, and tended to be more severe in women. No severe cases were seen among the wealthy.

6.3 Analysis of Archaeological Finds

6.3.1 Coffins, Caskets, and Their Hardware

6.3.1.1 Shape

Of the 622 analyzable burials, 450 had coffins sufficiently well preserved to determine shape. Of these, clearly the largest number were hexagonal in shape ("coffins"). In addition to hexagonal coffins, decagonal, octagonal, and square coffins, as well as rectangular caskets were also recovered (Table 3). The earliest rectangular coffin at the site post-dates 1878. Both shapes continue through the early twentieth century at the cemetery.

Shape	Qty.	%
hexagonal	324	72%
rectangular	84	19%
octagonal	21	5%
other	21	5%
Total	450	100%

Fetal individuals were buried only in rectangular caskets. Newborn burials were split evenly among hexagonal and rectangular. Infants, children, and adolescents were predominately buried in hexagonal coffins though some were rectangular. No other shapes were associated with subadults. Adults were predominately interred in hexagonal coffins though all shapes are represented. Decagonal coffins were exclusively used for adults. Similarly, elderly individuals were buried in nearly all the various shapes of coffin, but were predominately interred in hexagonal coffins (56-58%) There appears to be no correlation between coffin shape and gender. Twenty-seven percent of the rectangular caskets were associated with wealthy individuals, possibly suggesting a minor correlation between wealth/cost and rectangular caskets.

6.3.1.2 Undecorated Coffins and Caskets

A total of 315 of the coffins had no evidence of decorative or functional hardware such as handles, name plates, or crucifixes. All fetal burials and most newborn burials were in undecorated coffins; 80% of infants, 62% of children, and 56% of adolescents were also buried in undecorated coffins. Lack of decoration diminishes further with age, with 58% of coffins verified to contain adult burials, being undecorated and 16% of coffins verified to contain elderly burials, having no decorative hardware. Lack of decoration was most common on hexagonal coffins (n=166, 51%). Approximately 37% of rectangular coffins and less than 10% of octagonal coffins were undecorated. While the datable sample was too small to be statistically significant, there appears to be an increase over time in the percentage of undecorated coffins. There were slightly more male burials (36%) in undecorated coffins than female burials (33%).

6.3.1.3 Decorated Coffins and Caskets

Coffins and Caskets

All of the burials had been placed in coffins that were constructed of wood and were often varnished or even painted in colours such as red and yellow. The 1918 burial of Patrick Currie was exceptionally outfitted, in that he was buried in a wooden coffin that was in turn, enclosed in a cast iron sarcophagus (Plate 8).

Plate 8: Cast iron sarcophagus of Patrick Currie.

Handles

Long bar handles (Plate 9) were rare and with one exception occurred only after the turn of the twentieth century. Short bar handles (Plate 10) did not appear at Elmbank until the 1860s, but were used through the twentieth century. Swing bail handles (Plate 11) appeared in the 1850s, but were absent after 1920. There was clearly no preference based on gender. Swing bail handles were considerably more common among the less wealthy burials and may suggest that they are reflective of cost/wealth. The presence of handles increased with the age of the individual. No fetal burials and only one newborn burial had handles. Less than a third of children and infants were buried in coffins with handles and 53% of adults and adolescent burials were in coffins with handles. More than 80% of the coffins of elderly individuals had handles.

A basic attempt was made to assign a typology to the handles found at the Elmbank site (Appendix 8). This proved difficult due to a combination of factors including the initial descriptions and the paucity of similar handles. Several potential types were identified and examined for evidence of patterning within the population based on age, gender, wealth, and date. Unfortunately, the small number made any possible patterns extremely provisional. Instead it was decided to independently examine the individual attributes used in describing handles (handle style, lug style, and end tip style).

Among subadult burials, there appears to be no particular handle styles clearly limited to use on subadult coffins. The most common choice of handle was plain with tin man style, rodeo style, and faceted diamond style (Plate 12) being next most popular. The most popular handle, lug style, was inscribed “Our Darling” (Plate 13). This motif is only found in subadult burials. The most common end tip motifs were faceted or pine cone (Plate 14).

Plate 9: Long bar handle

Plate 10: Short bar handle

Plate 11: Swing bail handle

There were a number of handle styles limited to use with mature (adult and elderly) burials. Crosses, rounded-banded, wooden-twisted, iron-hexagonal, pheasant feather, rope, shaking hands (Plate 15), brush tip (only found with the elderly), parenthesis (also only found among the elderly), wooden-braided, and wooden-fifteen bump (Plate 16) styles were all found only among mature burials and in sufficient numbers to suggest a reasonable pattern. Plain handles, however, were the most common form among both adults and the elderly, with shaking hands being the most common decorative motif.

Plate 12: Faceted diamond style

A number of handle lug styles were found only among mature individuals. These include: hands, turtle backs, crosses (with two exceptions), curtain-rectangular, eight point spade, leaf cross, medieval armour, octagonal, rectangular (with two exceptions), tassels, “W,” and “X” styles. The most common motif with adult burials was rectangular. The elderly were most commonly found with crosses (Plate 17).

Plate 13: “Our Darling” inscribed lug

A number of end tip styles were limited to mature burials. Crosses, cones, lanterns, umbra style, and square end tips were only found among adults and the elderly. Most common in both cases were various umbra style end tips (Plate 18).

Plate 14: Pine cone style end tip

Escutcheons

Some coffins had decorative escutcheons (e.g., Plate 19). The earliest escutcheon from the site dates to 1871, or later, based on patent information found on an associated fragment of hardware. The earliest documentable burial with escutcheons dates to 1874. There appears to be no connection between cost/wealth and escutcheons. They are slightly more common on women’s coffins than men’s. A total of 44% of the elderly’s coffins had escutcheons.

Thumbscrews

Thumbscrews do not appear at Elmbank before the 1870s. The earliest dates to sometime after 1871, based on patent information found on associated coffin hardware. The earliest thumbscrew associated with a burial of known date is from 1874.

Plate 15: Handle motif of shaking hands

Crosses and Crucifixes

Decorative crosses and crucifixes on coffins appear more commonly with age, with 21% of the elderly coffins having crosses or crucifixes (e.g., Plates 20–21). No fetal or newborn coffins had such decoration. Less than 4% of child and infant burials had such decorations. Crosses and crucifixes as decorative coffin hardware do not occur in the Elmbank collection prior to 1864 and appear to be most common after the turn of the twentieth century. Their use appears to be divided roughly equally along gender lines.

Plate 16: Wooden-fifteen bump handle style

Plate 17: Cross style lug

Plate 18: Umbra style end tip

Metal Plates

Many burials included metal plates affixed to the coffins (Appendix 9). In many cases, these plates were well-preserved and include information on the individual, including their name, age, and date of death. In total, 71% of octagonal coffins and 63% of rectangular caskets had such metal plates. Only 39% of hexagonal coffins, however, had plates. They are found in burials spanning the 1850s through 1930s, but appear to be most common in the 1870s through 1890s. They are slightly more prevalent among the burials of women (62%) than men (50%) and are most commonly found in the burials of the elderly (62%).

Plate 19: Decorative escutcheons

Viewing Glass

Coffins with viewing glass panes (Appendix 10) are rare in subadults and becoming increasingly common with age with 36% of the elderly's coffins having viewing glass (e.g., Plate 22). The earliest appearance of a coffin with a viewing glass (Cat. #.1548) at Elmbank is **Burial 250** which dates to 1864. They appear to go out of fashion around the turn of the century and are not seen after 1906 (**Burial 77**). There appears to be no pattern in their use in male versus female burials.

Plate 20: Decorative cross

Plate 21: Decorative crucifix

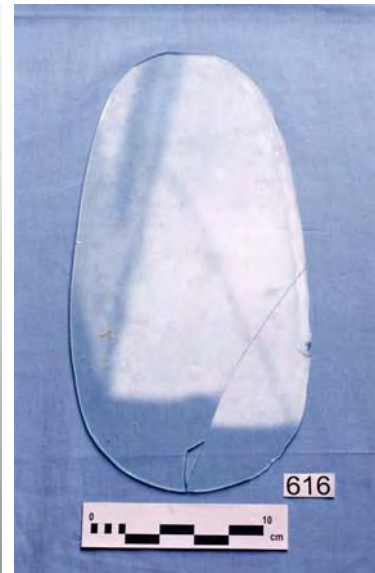

Plate 22: Viewing glass

6.3.2 Personal Items

6.3.2.1 Dress

Buttons appear across all age categories suggesting that all ages were generally buried dressed. Safety and straight pins were found in very small numbers and were found primarily among infant burials, although they are present in older burials in proportionally smaller numbers. Pins appear only after the turn of the twentieth century; the earliest documented case being **Burial 077** dated to 1906. Scapulars (Plate 23) only appear after 1873 (**Burial 055**, Cat. #.0317). Thirteen of the nineteen scapulars were worn by women. Almost all (up to 12 of the 13) of the scapulars are found with the elderly.

Plate 23: Scapular

6.3.2.2 Jewellery

Items of personal adornment such as jewellery are only found on adults and only after 1873 (**Burial 055**, Cat. #.0320). They are quite rare in the 1870s and 1880s and absent in the 1890s. They begin to appear slightly more commonly in the twentieth century burials. There appears to be no correlation with gender.

6.3.2.3 Religious Paraphernalia

Religious artifacts are not found with any of the fetal, newborn, or adolescent burials. Children and infants were, however, occasionally buried with such items. More than half (56%) of the religious items were buried with the elderly. They appear to be more commonly found with burials after the turn of the twentieth century and are more common with females (61 items associated with women and 30 with men). Bottles, presumably of holy water (Appendix 11; Plate 24), are found in only three of the datable burials but they span the period of 1864-1877. Pendants/medallions (Plate 25) are only found after 1880 (**Burial 112**, Cat. #.0676). Candles (n=2) are found only with women. The

Plate 24: Glass bottle containing water

most common religious artifacts recovered are rosaries (Appendix 12), with at least fifty represented in the collection.

6.3.2.4 Other Personal Items

A handful of other personal items were included in the burials. In three cases (**Burials 077, 255, and 594**), ceramics such as refined white earthenware (rwe), pearlware, blue flowware, mochaware and ironstone, were included in the burial. In **Burials 249, 273, 440, 469, 509, and 620**, hair combs and other hair accessories were found with adult female burials. **Burial 456** include a crumpled, but fairly well preserved, newspaper (Cat. #.2746). A white ball clay tobacco smoking pipe fragment (Cat. #.1902) was found with **Burial 311**, an adult male. Bank tokens (Cat. #s .0361, .0536, and .3659) were recovered from **Burials 065, 087, and 622**.

Plate 25: Pendant and medallion

6.3.3 Discussion: Devotion and Nationalism

Religious artifacts appear most commonly after the turn of the twentieth century and are more common with females. The most common religious artifacts recovered are rosaries with at least fifty represented in the collection. These items and some other pieces contain many evocative symbols of their Catholic faith, but this was expressed through a comparatively small repertoire of motifs. The limited range of iconography is probably more attributable to limitations in consumer choice than to personal preference.

A major question raised throughout the course of the project was the degree to which members of the Elmbank community celebrated or maintained their largely Irish roots. While the detection of material expressions of ethnicity in the archaeological record is fraught with difficulties and is frequently the subject of considerable debate, the coffin hardware and personal effects betray little in the way of a strong concern to express their “Irishness” through material means. In only two instances have uniquely Irish symbols been identified to date.

The first of these was apparent even before the excavations began, as it is to be found in the form of relief-carved shamrocks and a harp on the 1869 monument to Edward Lynch. Both motifs were strongly associated with Irish nationalism in the eighteenth and nineteenth centuries.

The second instance, appearing on the plate affixed to the coffin of Owen Lamb, who died in 1903, is rather more subtle. (Plate 26). The icon on the right edge of the central field of the plate is closely comparable to a symbol in early Medieval (circa fifth to seventh century A.D.) Irish religious art

known as a “monogrammatic cross”. Such symbols appear most frequently on “cross slabs”, essentially plain standing stones inscribed with a cross within a circle, and occasionally with some form of body. Such stones, as well the later High Crosses which developed from them were placed at boundaries of monastic holdings, in public places such as markets and along travel routes, and so remain comparatively common field monuments in Ireland. Monogrammatic crosses also appear occasionally as decorative elements on early Medieval stone saint’s shrines and in roundels on metal reliquaries.

Plate 26: The coffin plate from the burial of Owen Lamb.

The origin of the ringed cross lies not with the image of the crucifix (in the early church such depictions were considered to be in poor taste), but with the *chi-rho* or chrismon symbol, being the first two letters of “Christ” in Greek (*chi*=X and *rho*=P) The two letters were combined thus:

The chi-rho was never tremendously popular since the original function and meaning of the Greek was probably lost early on, which is evident in the manner in which the symbol was often altered in the Irish stone carvings. Given its obscurity, the symbol largely fell out of use in the Latin church by the later Middle Ages, although it remained in use in the Greek Orthodox church.

Related in Irish art are other types of cross slabs that may depict the *flabellum*, a liturgical fan. This motif is supposed to symbolize vigilance. As an item of office in the Latin church, its use did not extend past the fourteenth century. The flabellum would appear to account for the inclusion of the body element on some monogrammatic crosses.

As a symbol particularly evocative of Irish nationalism, however, the monogrammatic cross is anything but explicit. Rather, was Owen Lamb, or a family member a student of the esoterica of early Medieval Irish religious art, or was somebody recalling the inscribed cross slabs that survive as field monuments in Ireland. Such questions and others like it can only be addressed through more detailed study of the material and the development of the profiles of the individual, identifiable deceased.

6.4 The Re-Interment

In accordance with the terms of the closure order, all individual burials were re-interred separately, at Assumption Cemetery, Mississauga, with the dignity and the respect due to human remains.

Prior to re-interment, each individual and his or her associated coffin hardware were consolidated into the same bankers box. An attempt was made to have one box per burial, but in many cases, multiple boxes were needed. After all boxes were consolidated, they were separated into three different categories: unidentified individuals, individuals with nameplates and those with monuments. Clear instructions were then written on the top and sides of the box to ensure that there would be no confusion during re-interment. Thus, each box was carefully labelled with a burial number, the number of boxes associated with that burial, to which category it belonged, and whenever applicable, the name of the individual and/or the monument number. In cases where special circumstances surrounded the re-interment of burials, such as two or more burials beside and/or on top of one another, not only were special instructions written on the box but they were taped together in the same manner they were to be re-interred. Also, different coloured labels were used to differentiate family clusters. All boxes were taped shut with lids during this process to ensure elements were not lost or damaged. This procedure ensured that all burials were clearly marked and avoided any confusion during the re-interment process.

At Assumption Cemetery, 12 trenches were excavated: nine for the unidentified individuals and three for the individuals with name plates, along with the individual and family plots with monuments. Each trench was 22-33 inches wide and approximately 4 feet deep and was excavated by backhoe. Once a trench was dug, each burial was placed. The boxes were checked off in the master inventory to ensure that none were missing, that they were being placed in the right order, and to note if burials had multiple boxes. The boxes were then placed beside the trench where their lids were removed and placed at the bottom of the box. Before each burial was placed in the trench, they were checked to make sure they were in the right order. The burials were then placed in the trench following the measurements in the cemetery plan. Each burial was 23 inches apart and oriented east-west. Once in the trench, soil was carefully shovelled to fill the boxes to ensure that they would not move during the re-filling of the trench. When that was done, the backhoe carefully refilled the trench.

All of the Elmbank monuments that can be conserved will be re-erected in the appropriate locations at Assumption (Section 7.0).

7.0 THE MONUMENT CONSERVATION PROGRAM

The stone assessment and conservation program was designed to facilitate moving the surviving monuments and stones from Elmbank to Assumption Cemetery.

Past natural disasters such as Hurricane Hazel, as well as human interventions at the cemetery resulted in the dislocation of a large number of the stones. Prior to the initiation of this project, some of the larger monuments, most of them stone but one small one being made of iron, were clustered together on a concrete slab, while others were standing in various places about the site. Few were in their original locations.

Plate 27: The concrete cairns in which fragmentary stones were mounted.

Most of the flat tombstones, which had fallen, had been moved and mounted on six, double-sided concrete cairns (Plate 27). While they were originally set in concrete, most were merely lying in place. Smaller stone fragments, however, were assembled and set in concrete along the bases of the cairns. Some of these fragments were decorated but many were not. The cairns were set in pairs with a flat concrete “patio” in between. The patio had corner posts (which originally may have delineated family plots) with a number of stones and stone fragments set into the patio concrete. Some were identifiable (Appendix 13), but many were not.

Prior to any of these stones being moved, the condition of each stone was assessed and documented in both written and photographic form. The documentation system was designed so that it dovetailed with the genealogical and archeological recording and research. The monuments were grouped into four categories for the purposes of conservation assessment.

Category I monuments are those that can be re-erected. A total of 65 monuments were so classified. Twenty-eight of these were free-standing (including the eight which stood on the concrete pad). The remainder came from the cairns or the patios between the cairns. Four additional footstones and a partial stone may also be remounted.

Category II monuments, which consist of 11 stones, are those that may be safely re-erected following remedial treatment, which has been completed.

Category III monuments, consist of 11 stones that should not be re-erected as freestanding monuments but which may be safely mounted so that their inscriptions may be read for some time.

Category IV monuments include 9 specimens that are so severely degraded that they cannot be conserved and will not survive in an exterior setting.

Once the documentation was complete, the stones were moved to the side of the site in order to allow for the archeological program to begin. The flat stones on the cairns were placed on wooden skids. The larger monuments were moved with a sling (lifted by a Gradall).

A number of the monuments were large and fragmented. Prior to being moved, they were disassembled for stability and lifting. In such instances, all segments were labelled for subsequent re-assembly. The corner posts were removed from the patios as were the stones with heritage value. Four of the imbedded fragment runners (from the base of the cairn) that have identifiable pieces were retained and moved as single pieces by the Gradall.

Frost-free foundations for all of the repairable free-standing monuments recovered from the Elmbank cemetery will be constructed in order to re-erect them at Assumption. All foundations will be designed in accordance with the rules and regulations of the cemetery including the type of material and depth of foundation required. Extra stabilization work has been recommended for some of the free standing monuments in order to try to render them vandal-proof.

The ultimate goal of this program is to construct a respectful memorialization of the original cemetery, using as many of the original stone elements as possible. All stones and fragments have been moved to Assumption Cemetery.

8.0 CONCLUSIONS AND RECOMMENDATIONS

The closure of the Elmbank cemetery, located on the east half of Lot 8, Concession 5, in the former Township of Toronto, Peel County, within the Lester B. Pearson International Airport, entailed the exhumation of 622 individuals and their re-interment at Assumption Cemetery in Mississauga. All such work was undertaken in accordance with the stipulations laid forth in the closure order issued by the Cemeteries Registrar, Ministry of Business and Consumer Services.

Genealogical research being undertaken in conjunction with the cemetery closure has resulted in the identification of over 1500 descendents of those people originally interred at Elmbank whose identities are known, either through historic documentation, inscriptions on monuments at the site, or archaeological evidence.

The project also entailed the salvage excavation of the rectory and of the second brick church built at the Elmbank Mission in 1885. No physical evidence of the first church was found during the course of these investigations.

Finally, the grave markers at Elmbank have been removed from the site for conservation prior to

their re-erection at Assumption. Monuments to individuals or families whose remains were identified during the excavation will be re-located with the re-interred remains, provided that these stones themselves are sound. The stones with which no associations with remains were identified, or those which are too poorly preserved to be installed free-standing, will be incorporated within a commemorative monument designed to be in keeping with the setting of Assumption Cemetery.

The analysis of the archaeological and anthropological data collected during the study has resulted in an enhanced understanding of the history of a community which might otherwise have been forgotten. We anticipate the production of a book on the project, and would invite both the GTAA and the Archdiocese to consider supporting this endeavour.

In light of these results, the site of the Elmbank Mission may be considered free from further archaeological concern.

Documented age at Death:
Mended Fractures:

Burial#: 598

Cathrine

Coffin Shape: hexagonal
Gender: F
Social Status:
Pathologies Present:
Associated Burials:
Comments:

H---
Date of Interment:
Age at Death: 60+
Documented age at Death: 72
Mended Fractures:

Burial#: 599

Coffin Shape: hexagonal
Gender: F
Social Status:
Pathologies Present: Schmorl's node(s)
Associated Burials:
Comments:

Date of Interment:
Age at Death: 35 - 44
Documented age at Death:
Mended Fractures:

Burial#: 600

Coffin Shape: hexagonal
Gender: F
Social Status:
Pathologies Present: otitis media
Associated Burials:
Comments:

Date of Interment:
Age at Death: 60+
Documented age at Death:
Mended Fractures:

Burial#: 601

John

Coffin Shape: hexagonal

Gender: M

Social Status:

Pathologies Present: bifurcate spinous processes; Schmorl's node(s)

Associated Burials:

Comments:

Banane

Date of Interment: 1887

Age at Death: 60+

Documented age at Death: 87

Mended Fractures:

Burial#: 602

Coffin Shape: hexagonal

Gender: F

Social Status:

Pathologies Present:

Associated Burials: 615,619,579,568

Comments:

Date of Interment:

Age at Death: 30-44

Documented age at Death:

Mended Fractures:

Burial#: 603

Coffin Shape: hexagonal

Gender: M

Social Status:

Pathologies Present:

Associated Burials:

Comments:

Date of Interment:

Age at Death: 40-49

Documented age at Death:

Mended Fractures:

Burial#: 604

Coffin Shape:

Gender:

Social Status:

Pathologies Present:

Associated Burials:

Comments:

Date of Interment:

Age at Death: 6-12

Documented age at Death:

Mended Fractures:

Burial#: 605

Coffin Shape: decagonal

Gender: M

Social Status:

Pathologies Present: pseudoarthrosis of ulna

Associated Burials:

Comments:

Date of Interment:

Age at Death: 30-44

Documented age at Death:

Mended Fractures: fractured radius

Burial#: 606

Coffin Shape:

Gender:

Social Status:

Pathologies Present: cribra orbitalia

Associated Burials:

Comments:

Date of Interment:

Age at Death: 12-18

Documented age at Death:

Mended Fractures:

Burial#: 607

Coffin Shape: hexagonal
Gender: F
Social Status:
Pathologies Present: cribra orbitalia
Associated Burials:
Comments:

Date of Interment:
Age at Death: adult
Documented age at Death:
Mended Fractures:

Burial#: 608

Coffin Shape: hexagonal
Gender:
Social Status:
Pathologies Present: cribra orbitalia
Associated Burials:
Comments:

Date of Interment:
Age at Death: 7-14.5
Documented age at Death:
Mended Fractures:

Burial#: 609

Michael

Coffin Shape: rectangular with octagonal
Gender: M
Social Status:
Pathologies Present: Schmorl's nodes;
bifurcated spinous
processes
Associated Burials: 595
Comments:

Whitty

Date of Interment: 1898
Age at Death: 50+
Documented age at Death: 62
Mended Fractures:

Burial#: 610

Coffin Shape: hexagonal
Gender: M
Social Status:
Pathologies Present: Schmorl's node(s)
Associated Burials:
Comments:

Date of Interment:
Age at Death: 36 - 63
Documented age at Death:
Mended Fractures:

Burial#: 611

Coffin Shape:
Gender:
Social Status:
Pathologies Present:
Associated Burials: 629
Comments:

Date of Interment:
Age at Death: 5.5-8.7
Documented age at Death:
Mended Fractures:

Burial#: 612

Coffin Shape: hexagonal
Gender: M
Social Status:
Pathologies Present: cribra; Schmorl's node(s)
Associated Burials:
Comments:

Date of Interment:
Age at Death: adult
Documented age at Death:
Mended Fractures:

Burial#: 613

Catherine

Coffin Shape: hexagonal

Gender: F

Social Status:

Pathologies Present: otitis media

Associated Burials:

Comments: poor preservation

Mulvey nee Doherty

Date of Interment: 1875

Age at Death: adult

Documented age at Death:

Mended Fractures:

Burial#: 614

Coffin Shape:

Gender: M

Social Status:

Pathologies Present: eburnation of pelvis

Associated Burials:

Comments:

Date of Interment:

Age at Death: 50+

Documented age at Death:

Mended Fractures: fractured clavicle

Burial#: 615

Coffin Shape: hexagonal

Gender:

Social Status:

Pathologies Present: cribra orbitalia

Associated Burials: 602,619,579,568

Comments:

Date of Interment:

Age at Death: 4-7.5

Documented age at Death:

Mended Fractures:

Burial#: 616

Coffin Shape: rectangular

Gender: F

Social Status:

Pathologies Present:

Associated Burials: 623,628

Comments: probably previously exhumed;

Date of Interment:

Age at Death: 30-44

Documented age at Death:

Mended Fractures:

Burial#: 617

Coffin Shape: rectangular

Gender: M

Social Status:

Pathologies Present: cribra; otitis media;
osteoarthritis;
osteophytes on
vertebrae; Schmorl's
node(s)

Associated Burials:

Comments:

Date of Interment:

Age at Death: 60+

Documented age at Death:

Mended Fractures:

Burial#: 618

Coffin Shape: rectangular with octagonal
Gender: M
Social Status:
Pathologies Present: Schmorl's node(s)
Associated Burials:
Comments:

Date of Interment:
Age at Death: 16-24
Documented age at Death:
Mended Fractures:

Burial#: 619

Coffin Shape: hexagonal
Gender:
Social Status:
Pathologies Present: cribra orbitalia
Associated Burials: 602,615,579,568
Comments:

Date of Interment:
Age at Death: 4-8.7
Documented age at Death:
Mended Fractures:

Burial#: 620

Coffin Shape: rectangular with octagonal
Gender: F
Social Status:
Pathologies Present:
Associated Burials:
Comments: coffin hardware requires this burial to postdate 1893

Date of Interment: post-1893
Age at Death: 50+
Documented age at Death:
Mended Fractures:

Burial#: 621

Coffin Shape: rectangular
Gender:
Social Status:
Pathologies Present: cribra orbitalia
Associated Burials:
Comments:

Date of Interment:
Age at Death: .92-2
Documented age at Death:
Mended Fractures:

Burial#: 622

Coffin Shape: hexagonal
Gender: F
Social Status:
Pathologies Present:
Associated Burials:

Date of Interment:
Age at Death: adult
Documented age at Death:
Mended Fractures:

Comments: probably previously exhumed; There was a sub-adult atop the adult, but it was in bad shape and thus only one burial no., this explains all the handles

Burial#: 623

Coffin Shape:
Gender: F
Social Status:
Pathologies Present: lipping on vertebrae
Associated Burials: 616,628
Comments: disturbed remains

Date of Interment:
Age at Death: .
Documented age at Death:
Mended Fractures:

Burial#: 624

Coffin Shape: hexagonal bentwood
Gender: F
Social Status:
Pathologies Present:
Associated Burials:
Comments:

Date of Interment:
Age at Death: elderly?
Documented age at Death:
Mended Fractures:

Burial#: 625

Coffin Shape: hexagonal
Gender: M
Social Status:
Pathologies Present:
Associated Burials:
Comments: disturbed with few remains

Date of Interment:
Age at Death: <14
Documented age at Death:
Mended Fractures:

Burial#: 626

Coffin Shape: hexagonal
Gender: M
Social Status:
Pathologies Present:
Associated Burials:
Comments:

Date of Interment:
Age at Death: 35 - 44
Documented age at Death:
Mended Fractures:

Burial#: 627

Joseph N.

Coffin Shape: hexagonal
Gender: M
Social Status:
Pathologies Present:
Associated Burials: 585
Comments:

McBride

Date of Interment: 1886
Age at Death: 5-9
Documented age at Death: 7
Mended Fractures:

Burial#: 628

Frances Rosanna

Coffin Shape: rectangular
Gender: F
Social Status:
Pathologies Present: excess bony growth on patella; edentulous
Associated Burials: 616,623
Comments: disturbed with few remains

Lanpier/Lamphier

Date of Interment: 1893
Age at Death: .
Documented age at Death:
Mended Fractures:

Burial#: 629

Coffin Shape: hexagonal
Gender: F
Social Status:
Pathologies Present: Schmorl's node(s)
Associated Burials: 611
Comments:

Date of Interment:
Age at Death: adult
Documented age at Death:
Mended Fractures:

Burial#: 630

Mary Anne Louisa

Coffin Shape: hexagonal

Gender: F

Social Status:

Pathologies Present:

Associated Burials:

Comments:

Lanphier/Lamphier

Date of Interment: 1862

Age at Death: .5-1

Documented age at Death: .83

Mended Fractures:

Burial#: 631

Coffin Shape:

Gender:

Social Status:

Pathologies Present:

Associated Burials: 632,634

Comments:

Date of Interment:

Age at Death: 3.5-6.3

Documented age at Death:

Mended Fractures:

Burial#: 632

Coffin Shape: hexagonal

Gender: M

Social Status:

Pathologies Present: cribra orbitalia

Associated Burials: 631,634

Comments: Gradall disturbed; well preserved

Date of Interment:

Age at Death: adult

Documented age at Death:

Mended Fractures:

Burial#: 633

Coffin Shape: hexagonal

Gender:

Social Status:

Pathologies Present:

Associated Burials:

Comments:

Date of Interment:

Age at Death: .25-.75

Documented age at Death:

Mended Fractures:

Burial#: 634

Coffin Shape: hexagonal

Gender: M

Social Status:

Pathologies Present:

Associated Burials: 631,632

Comments:

Date of Interment:

Age at Death: 50+

Documented age at Death:

Mended Fractures:

APPENDIX 4
COFFIN HARDWARE CATALOGUE

Coffin Hardware Catalogue

Burial# 001

.0016	2	coffin tack	metal-white	
.0003	1	crucifix	metal-white	black coating on top of cap pegs at back of Christ's hands that fit into cross, nail in middle of torso to hold Christ to cross - broken
.0001	24	handle-short bar	metal-white	
.0006	3	hinge	metal-iron	folded over, 4 nail holes, 2 on each side
.0007	1	hinge	metal-iron	folded over, 4 nail holes- 2 on each side
.0008	2	iron coffin decoration	metal-iron	with 2 very long nails
.0009	1	iron coffin decoration	metal-iron	
.0004	1	knob	metal-white	
.0010	4	misc. hardware-latch	metal-iron	very rusted
.0012	1	nail-cut	metal-iron	
.0015	12	nail-unidentifiable	metal-iron?	
.0013	8	nail-wire	metal-iron	
.0014	60	nail-wire	metal-unidentifiable	
.0002	1	plate-name plate	metal-silver plate?	

Burial# 003

.0019	9	nail-cut	metal-iron
.0020	2	nail-cut	metal-iron
.0021	1	nail-cut	metal-iron
.0022	12	nail-cut	metal-iron
.0023	5	nail-unidentifiable	metal-iron
.0018	2	screw-unidentifiable	metal-iron

Burial# 004

.0024	22	nail-cut	metal-iron
.0025	11	nail-cut	metal-iron

Burial# 005

.0028	20	nail-cut	metal-iron
.0029	13	nail-cut	metal-iron
.0030	10	nail-cut	metal-iron
.0031	15	nail-unidentifiable	metal-iron
.0027	2	screw-unidentifiable	metal-iron

Burial# 006

.0037	1	coffin plate-decorative	metal-white
.0038	1	coffin plate-decorative	metal-white
.0043	4	coffin tack	metal-iron
.0035	6	escutcheon	metal-white
.0034	12	handle-short bar	metal-white?
.0040	1	knob	metal-white
.0044	1	nail-cut	metal-iron
.0045	2	nail-cut	metal-iron
.0046	1	nail-cut	metal-iron
.0047	1	nail-cut	metal-iron
.0048	34	nail-cut	metal-iron
.0050	2	nail-unidentifiable	metal-iron
.0033	1	plate-name plate	metal-white?
.0039	2	screw-decorative	metal-white
.0049	1	screw-unidentifiable	metal-iron
.0042	2	tack-fabric	metal-white
.0036	5	thumbscrew	metal-white
.0032	1	viewing glass	glass

Burial# 007

.0053	6	nail-cut	metal-iron
.0054	5	nail-cut	metal-iron
.0055	11	nail-unidentifiable	metal-iron
.0051	1	nail-wrought	metal-iron
.0052	3	nail-wrought	metal-iron

Burial# 008

.0061	4	coffin tack	metal-white	
.0059	6	escutcheon	metal-white	four are connected to thumbscrews
.0058	6	handle-swing bail	metal-white	
.0062	1	nail-cut	metal-iron	
.0063	5	nail-cut	metal-iron	
.0064	5	nail-cut	metal-iron	
.0065	44	nail-cut	metal-iron	
.0068	37	nail-unidentifiable	metal-iron	
.0066	23	nail-wire	metal-iron	
.0067	17	nail-wire	metal-iron	
.0060	7	thumbscrew	metal-white	four are connected to escutcheons

Burial# 009

.0071	4	coffin screw	metal-white	
.0070	4	handle-swing bail	metal-white	one handle broken in two
.0072	7	nail-cut	metal-iron	
.0073	3	nail-cut	metal-iron	
.0074	42	nail-cut	metal-iron	

Burial# 010

.0091	1	nail-cut	metal-iron
.0092	1	nail-cut	metal-iron

Burial# 011

.0095	12	handle-short bar	metal-white	
.0099	5	misc. hardware-latch	metal-iron	
.0103	37	nail-wire	metal-iron	
.0104	25	nail-wire	metal-iron	
.0105	79	nail-wire	metal-iron	
.0100	3	screw-unidentifiable	metal-iron	
.0101	1	screw-unidentifiable	metal-iron	
.0102	1	screw-unidentifiable	metal-iron	
.0098	5	tack-decorative	metal-copper alloy	
.0096	1	thumbscrew	metal-white	
.0097	1	thumbscrew	metal-white	
.0094	1	viewing glass	glass	in 83 pieces

Burial# 012

.0106	9	nail-cut	metal-iron
.0107	2	nail-cut	metal-iron
.0108	26	nail-cut	metal-iron
.0109	16	nail-unidentifiable	metal-iron
.0110	1	nail-wire	metal-iron
.0111	5	screw-unidentifiable	metal-iron

Burial# 013

.0112	9	nail-cut	metal-iron
.0113	1	nail-cut	metal-iron
.0114	18	nail-cut	metal-iron
.0115	20	nail-wire	metal-iron

Burial# 014

.0116	1	nail-cut	metal-iron
.0117	7	nail-cut	metal-iron
.0118	16	nail-cut	metal-iron

Burial# 015

.0119	2	nail-cut	metal-iron
.0120	3	nail-cut	metal-iron
.0121	3	nail-cut	metal-iron

Burial# 016

.0122	8	nail-cut	metal-iron
.0123	1	nail-cut	metal-iron
.0124	1	nail-cut	metal-iron
.0125	5	nail-wire	metal-iron

Burial# 017

.0085	1	nail-cut	metal-iron
.0086	2	nail-cut	metal-iron
.0087	4	nail-cut	metal-iron
.0089	11	nail-cut	metal-iron
.0088	1	screw-unidentifiable	metal-iron

Burial# 018

.0079	11	nail-cut	metal-iron	mixed with B.9 and some B.17
.0080	7	nail-cut	metal-iron	mixed with B.9 and some B.17
.0081	3	nail-cut	metal-iron	mixed with B.9 and some B.17
.0082	47	nail-cut	metal-iron	mixed with B.9 and some B.17
.0083	6	nail-unidentifiable	metal-iron	mixed with B.9 and some B.17
.0077	1	nail-wire	metal-iron	mixed with B.9 and some B.17
.0078	1	nail-wire	metal-iron	mixed with B.9 and some B.17
.0075	5	screw-unidentifiable	metal-iron	mixed with B.9 and some B.17
.0076	2	screw-unidentifiable	metal-iron	mixed with B.9 and some B.17

Burial# 020

.0126	14	nail-cut	metal-iron
.0127	28	nail-cut	metal-iron
.0128	4	screw-slothead	metal-iron

Burial# 021

.0129	8	nail-cut	metal-iron
.0130	4	nail-cut	metal-iron

Burial# 022

.0131	4	nail-cut	metal-iron
.0132	14	nail-cut	metal-iron

Burial# 023

.0133	16	nail-cut	metal-iron
.0134	1	nail-cut	metal-iron
.0135	4	nail-cut	metal-iron
.0136	19	nail-cut	metal-iron
.0137	2	screw-unidentifiable	metal-iron

Burial# 024

.0138	19	nail-cut	metal-iron
.0139	15	nail-cut	metal-iron

Burial# 025

.0140	7	nail-cut	metal-iron
.0141	4	nail-cut	metal-iron
.0142	6	nail-cut	metal-iron
.0143	38	nail-cut	metal-iron

Burial# 026

.0144	12	nail-cut	metal-iron
.0145	1	nail-cut	metal-iron
.0146	1	nail-cut	metal-iron
.0147	1	nail-cut	metal-iron
.0148	32	nail-cut	metal-iron

Burial# 027

.0155	8	escutcheon	metal-white	yellow paint on back
.0154	5	handle-swing bail	metal-white	
.0161	6	nail-cut	metal-iron	
.0162	17	nail-cut	metal-iron	
.0163	4	nail-cut	metal-iron	
.0165	55	nail-cut	metal-iron	
.0164	1	screw-unidentifiable	metal-iron	
.0156	7	thumbscrew	metal-white	

Burial# 028

.0166	16	nail-cut	metal-iron
.0167	12	nail-cut	metal-iron
.0168	61	nail-cut	metal-iron

Burial# 029

.0169	9	nail-cut	metal-iron
.0170	9	nail-cut	metal-iron

Burial# 030

.0171	5	nail-cut	metal-iron
.0172	8	nail-cut	metal-iron

Burial# 031

.0175	9	nail-cut	metal-iron	
.0178	31	nail-cut	metal-iron	
.0176	2	screw-slothead	metal-iron	tapered ends
.0177	2	screw-slothead	metal-iron	

Burial# 032

.0179	9	nail-cut	metal-iron
.0180	2	nail-cut	metal-iron
.0181	6	nail-cut	metal-iron
.0184	34	nail-cut	metal-iron
.0182	2	screw-slothead	metal-iron
.0183	1	screw-slothead	metal-iron

Burial# 033

.0185	8	nail-cut	metal-iron
.0186	10	nail-cut	metal-iron
.0187	3	nail-cut	metal-iron
.0188	57	nail-cut	metal-iron

Burial# 035

.0191	7	nail-cut	metal-iron
.0192	2	nail-cut	metal-iron
.0193	31	nail-cut	metal-iron
.0190	1	screw-unidentifiable	metal-iron

Burial# 036

.0194	15	nail-cut	metal-iron
.0195	14	nail-cut	metal-iron

Burial# 037

.0196	13	nail-cut	metal-iron
.0198	13	nail-cut	metal-iron
.0197	2	screw-unidentifiable	metal-iron

Burial# 038

.0204	1	nail-cut	metal-iron	
.0205	8	nail-cut	metal-iron	
.0206	4	nail-cut	metal-iron	
.0208	21	nail-cut	metal-iron	
.0207	1	screw-unidentifiable	metal-iron	slightly tapered at the bottom

Burial# 039

.0209	23	nail-cut	metal-iron
.0210	1	nail-cut	metal-iron
.0211	1	nail-cut	metal-iron
.0212	7	nail-cut	metal-iron

Burial# 040

.0213	4	handle-swing bail	metal-iron
.0214	5	nail-cut	metal-iron
.0215	17	nail-cut	metal-iron

Burial# 041

.0217	4	coffin cross	metal-white	base width = 36.0mm
.0218	1	coffin cross	metal-white	base width = 90.2mm
.0220	1	coffin cross	fabric	
.0227	26	corner moulding	metal-copper alloy?	many are broken; very fragile; on corner of wood trim moulding
.0221	7	escutcheon	metal-white	
.0216	24	handle-short bar	metal-white	
.0225	4	hinge	metal-iron	extremely rusted over, unable to tell width or number of holes for screws; one is broken in two
.0219	1	knob	metal-white	
.0228	2	misc. hardware	metal-white	
.0233	1	misc. hardware	metal-white	resembles a spike, but cylindrical with a ball-shaped head
.0230	9	nail-cut	metal-iron	
.0231	2	nail-cut	metal-iron	
.0234	35	nail-cut	metal-iron	
.0232	1	screw-slothead	metal-iron	
.0224	22	tack-fabric	metal-white	
.0222	7	thumbscrew	metal-white	one is still attached to an escutcheon
.0223	1	thumbscrew	metal-white	
.0226	1	viewing glass	glass	
.0229	48	wire	metal-iron	was arranged in a circular pattern in burial; perhaps a wreath or outlining of viewing glass; has smaller pieces of wire wound around it, similar to barbed wire but no ends poking out

Burial# 042

.0235	9	nail-cut	metal-iron
.0238	34	nail-cut	metal-iron
.0236	1	screw-unidentifiable	metal-iron
.0237	1	screw-unidentifiable	metal-iron

Burial# 043

.0239	13	nail-cut	metal-iron
.0240	2	nail-cut	metal-iron
.0241	11	nail-cut	metal-iron

Burial# 044

.0244	1	coffin crucifix	metal-white
.0242	6	handle-short bar	metal-white
.0245	1	misc. hardware	metal-white?
.0243	1	plate-name plate	metal-white
.0246	2	thumbscrew	metal-iron

Burial# 045

.0248	1	coffin crucifix	metal-white
.0249	10	handle-long bar	metal-white
.0251	1	misc. hardware	metal
.0247	1	plate-generic	metal-white
.0250	1	thumbscrew	metal-iron

Burial# 046

.0259	7	coffin plate-decorative	metal-copper alloy
.0256	4	escutcheon	metal-white
.3796	2	screw-unidentifiable	metal-iron
.0255	1	strapping	wood
.0258	8	tack-star	metal-copper alloy
.0257	2	thumbscrew	metal-white
.0253	1	viewing glass	glass

Burial# 047

.0260	5	nail-cut	metal-iron
.0261	4	nail-cut	metal-iron
.0262	17	nail-cut	metal-iron

Burial# 048

.0264	18	nail-cut	metal-iron
.0265	20	nail-cut	metal-iron
.0263	5	screw-slothead	metal-iron

blunt ends

Burial# 049

.0267	1	nail-cut	metal-iron
.0268	1	nail-cut	metal-iron
.0269	1	nail-cut	metal-iron
.0270	1	nail-cut	metal-iron
.0266	1	screw-slothead	metal-iron

Burial# 050

.0272	25	nail-cut	metal-iron

.0451	2	button	metal-unidentifiable		
.0448	1	ceramic	ceramic-RWE		
.0452	1	pin-safety	metal-iron		only the head
Burial#	078				
.0457	1	button	metal-unidentifiable		too destroyed for measurements
.0458	1	button	glass		
.0459	1	button	glass		
.0460	1	button	glass		
.0456	5	pin-safety	metal-iron		probably all from one safety pin
Burial#	080				
.0475	1	button	shell		
.0485	69	rosary	wood		
Burial#	081				
.0487	1	button	shell		
.0497	1	button	metal-unidentifiable		
.0499	2	pendant	metal-copper alloy?		has writing on it, but unable to make out the exact letters
.0498	12	rosary	wood		

Burial#	082				
.0512		1	cross	metal-copper alloy	in a block of clay
.0508		1	pendant	metal-copper alloy with inlaid wood	with loop at top
Burial#	084				
.0521		1	button	shell	
Burial#	086				
.0529		2	button	glass	
.0530		1	button	glass	
Burial#	087				
.0533		1	button	glass	
.0534		4	button	glass	
.0535		2	button	glass	
.0536		1	token	metal-copper alloy?	possibly Britannia on one side but very corroded
Burial#	091				
.0558		1	button	glass	
.0559		1	button	glass	
.0561		1	pendant	metal-copper alloy	with a loop at one end, possibly also part of a rosary
.0560		28	rosary	wood, metal	
Burial#	092				
.0562		2	pin-straight	metal-copper alloy	one pin in two pieces, with some fabric still attached
Burial#	095				
.0583		1	temperance medallion	metal-white	The very revd T. Mathew President (end of written info); next side has an image of a man & woman standing either side of a crest with a ram and IHS on the steps, both hold flags across crest w/angel flying, below 2 children sitting with a 3-leaf clover; name underneath: "DAVID BRIM" letters on top read: "IN
Burial#	096				
.0587		2	button	glass	
.0588		1	button	glass	
.0589		2	button	glass	
Burial#	097				
.0594		14	rosary	wood	all beads are too desiccated for any accurate measurements
.0598		1	stud	metal-unidentifiable	no holes, has stem but it is broken off
Burial#	098				
.0606		1	pendant	metal-copper and iron	probably a saints medallion, but illegible
Burial#	100				
.0616		2	button	glass	
.0617		3	button	glass	
.0618		2	button	glass	
.0619		1	button	glass	
.0614		16	crucifix	metal-copper alloy	there are at least 7 crosses (no. of heads), thin and fragile; measurements are approximate
.0613		23	rosary	wood	

Burial#	101				
.0623		1	button	glass	broken
.0624		3	button	glass	
Burial#	102				
.0627		1	pendant	metal-copper and iron	probably a saints medallion, but illegible
Burial#	103				
.0630		12	rosary	wood	
Burial#	105				
.0642		4	bead	wood	possibly part of a rosary at one time
.0643		3	bead	wood	possibly part of a rosary at one time
.0637		1	button	glass	
.0638		4	button	glass	
.0639		1	button	glass	
.0640		1	button	bone	
.0641		119	rosary	wood	including 22 pieces of copper chain
.0636		1	temperance medallion	metal-white	extremely corroded; resembles medallion from B.95; has same image on back
Burial#	106				
.0655		55	rosary	wood	
Burial#	110				
.0657		1	button	glass	
.0658		1	button	glass	
Burial#	111				
.0663		1	button	glass	
.0664		1	button	glass	
Burial#	112				
.0674		1	button	glass	
.0675		1	button	glass	
.0667		1	necklace	leather	
.0676		1	pendant	metal-copper alloy	probably a saints medallion, but illegible
Burial#	122				
.0725		61	bead	glass	all black beads were found together in head area; perhaps a hair accessory or sewn to a pillow
.0726		323	bead	glass	all beads are of various lengths; all black beads were found together in head area; perhaps a hair accessory or sewn to a pillow
.0727		6	bead	glass	all black beads were found together in head area; perhaps a hair accessory or sewn to a pillow
.0728		5	bead	glass	all black beads were found together in head area; perhaps a hair accessory or sewn to a pillow
.0723		1	bottle	glass	with a cork and clear liquid inside, probably holy water
.0729		6	button	glass	all black beads were found together in head area; perhaps a hair accessory or sewn to a pillow
.0724		22	rosary	wood	

Burial#	123				
.0741		2	button	glass	
.0742		1	eyelet	metal-iron	probably from a shoe, still has some leather connected to it
Burial#	124				
.0747		6	button	glass	
Burial#	125				
.0753		1	button	glass	
Burial#	127

Patent Info: **Complete:** yes
Shape rectangular-ornate border **Length:** 215.0 **Width:** 116.2
Lettering Style: engraved-zig zag **Decoration:** swirl type border
Inscription: PATRICK EGAN/ AGED 67 YEARS

Burial#: 497

.2901 1 plate-generic metal-white

Patent Info: **Complete:** yes

Shape scroll-simple **Length:** 227.0 **Width:** 105.9

Lettering Style: raised-block plain **Decoration:**

Inscription: AT REST

Burial#: 501

.2925 1 plate-generic metal-silver plate

Patent Info: **Complete:** yes

Shape rectangular-plain **Length:** 167.0 **Width:** 81.9

Lettering Style: raised-block plain **Decoration:** pressed border around lettering

Inscription: AT REST

.2927 1 coffin plate-decorative metal-white

Patent Info: **Complete:** yes

Shape **Length:** 80.8 **Width:** 50.1

Lettering Style: **Decoration:**

Inscription:

Burial#: 502

.2933 1 plate-generic metal-white

Patent Info: **Complete:** yes

Shape rectangular-framed **Length:** 210.0 **Width:** 118.7

Lettering Style: raised-stamped **Decoration:** fancy M

Inscription: MOTHER

Burial#: 505

.2976 1 plate-name plate metal-white

Patent Info: **Complete:** yes

Shape rectangular-plain **Length:** 200.0 **Width:** 95.2

Lettering Style: engraved-smooth **Decoration:**

Inscription: MARY HOLLEY/ DIED/ APRIL 2ND 1931/ R.I.P

Burial#: 506

.2981 1 plate-name plate metal-silver plate

Patent Info: **Complete:** yes

Shape oval-tanged **Length:** 204.0 **Width:** 123.1

Lettering Style: engraved-zig zag **Decoration:**

Inscription: PERRIT. H. HOLLY/ AGED 21 YEARS

Burial#: 509

.3001 1 coffin plate-decorative metal-white

Patent Info: **Complete:** yes

Shape **Length:** 150.3 **Width:** 84.8

Lettering Style: **Decoration:**

Inscription:

.3002 1 coffin plate-decorative metal-white

Patent Info: **Complete:** yes

Shape **Length:** 118.0 **Width:** 94.8

Inscription:

Burial#: 511

.3011 1 plate-name plate metal-silver plate

Patent Info: **Complete:** yes

Shape rectangular-ornate border **Length:** 150.8 **Width:** 115.7

Lettering Style: engraved-smooth **Decoration:** thistle-like flowers at each corner

Inscription: MARY SMYTH/ DIED/ FEBY 20, 1871/ AGED 47 YEARS

Burial#: 512

.3024 1 plate-blank metal-silver plate

Patent Info: **Complete:** yes

Shape cross **Length:** 204.0 **Width:** 171.0

Lettering Style: **Decoration:** crown in circle at base of cross

Inscription:

unreadable, there may have been writing on it, but very corroded.

.3025 1 plate-generic metal-white

Patent Info: **Complete:** yes

Shape rectangular-with flourish **Length:** 100.6 **Width:** 58.7

Lettering Style: raised-block plain **Decoration:** flowers and leaves on the left of the plate

Inscription: OUR DARLING

Burial#: 515

.3049 2 coffin plate-decorative metal-white

Patent Info: **Complete:** yes

Shape **Length:** 88.1 **Width:** 53.1

Lettering Style: **Decoration:**

Inscription:

Burial#: 518

.3068 1 plate-generic metal-silver plate

Patent Info: **Complete:** yes

Shape rectangular-framed **Length:** 104.7 **Width:** 54.9

Lettering Style: raised-moulded **Decoration:** ridged border

Inscription: OUR LOVED ONE

Burial#: 523

.3083 1 plate-name plate metal-silver plate

Patent Info: **Complete:** yes

Shape oval **Length:** 0.0 **Width:** 0.0

Lettering Style: engraved-smooth **Decoration:** leaf border around lettering

Inscription: WILLIAM NEIL/ AGED 64 YEARS

Burial#: 525

.3097 1 plate-name plate metal-silver plate

Patent Info: **Complete:** yes

Shape rectangular-ornate border **Length:** 166.0 **Width:** 127.6

Lettering Style: engraved-smooth **Decoration:** roses at each corner

Inscription: E_ER O_N_/ DIED/ ___APRIL___

very corroded; the name looks like Esther

Burial#: 526

.3105 1 plate-generic metal-white
Patent Info: 18 **Complete:** yes
Shape rectangular-with flourish **Length:** 101.1 **Width:** 59.3
Lettering Style: raised-moulded **Decoration:** leaves and flowers on the left of the plate
Inscription: OUR DARLING

Burial#: 534

.3149 1 plate-name plate metal-silver plate
Patent Info: **Complete:** yes
Shape rectangular-plain **Length:** 190.0 **Width:** 98.5
Lettering Style: engraved-combination **Decoration:**
Inscription: HANNAH BANANE/ DIED/ JANUARY 14TH, 1908/ AGED 75 YEARS

Burial#: 543

.3182 1 plate-name plate metal-white
Patent Info: **Complete:** yes
Shape coat-of-arms **Length:** 250.0 **Width:** 202.0
Lettering Style: engraved-smooth **Decoration:**
Inscription: ALICE KENNEDY/ DIED/ AUGUST 10TH, 1860/ AGED 75 YEARS

Burial#: 549

.3221 1 plate-name plate metal-silver plate
Patent Info: **Complete:** yes
Shape cross **Length:** 202.0 **Width:** 171.0
Lettering Style: engraved-smooth **Decoration:** crown in a circle at base of cross
Inscription: GEORGE BRETT/ DIED MAR 20TH 1910/ AGED 89 YEARS

Burial#: 555

.3263 1 plate-name plate metal-silver plate
Patent Info: **Complete:** yes
Shape rectangular-rounded tangs **Length:** 103.0 **Width:** 71.8
Lettering Style: engraved-smooth **Decoration:**
Inscription: WM. J. JOHNSTON/ AGED 8 MONTHS

Burial#: 558

.3274 1 plate-name plate metal-silver plate
Patent Info: **Complete:** yes
Shape rectangular-cut corners **Length:** 107.6 **Width:** 78.3
Lettering Style: engraved-smooth **Decoration:** oval border around lettering
Inscription: CHARLOTTE BANANE/ AGED 2 YEARS

Burial#: 565

.3294 1 plate-name plate metal-silver plate
Patent Info: **Complete:** yes
Shape oval-ornate border **Length:** 200.0 **Width:** 124.0
Lettering Style: engraved-zig zag **Decoration:**
Inscription: BRIDGET HAYDON/ AGED 73 YEARS
 she is possibly the Bridget Heydon listed, but no information to cross-reference

.3301 1 coffin plate-decorative metal-iron
Patent Info: **Complete:** yes
Shape **Length:** 99.4 **Width:** 25.7
